

BS 04DB-h

Magnetic Field Source

Short description

The BS 04DB magnetic field source generates a B field with an area of approximately 3 mm. The field, which emerges from the probe's front side, is used to scan the surface of the PCB. This allows for the localization and identification of magnetic weak spots in the layout and component areas (wiring, components, and component connectors).

Technical parameter

Probe head dimensions	1 mm - 3 mm
