MODEL CODE

The Hardware resources are identified by the following Model Code.

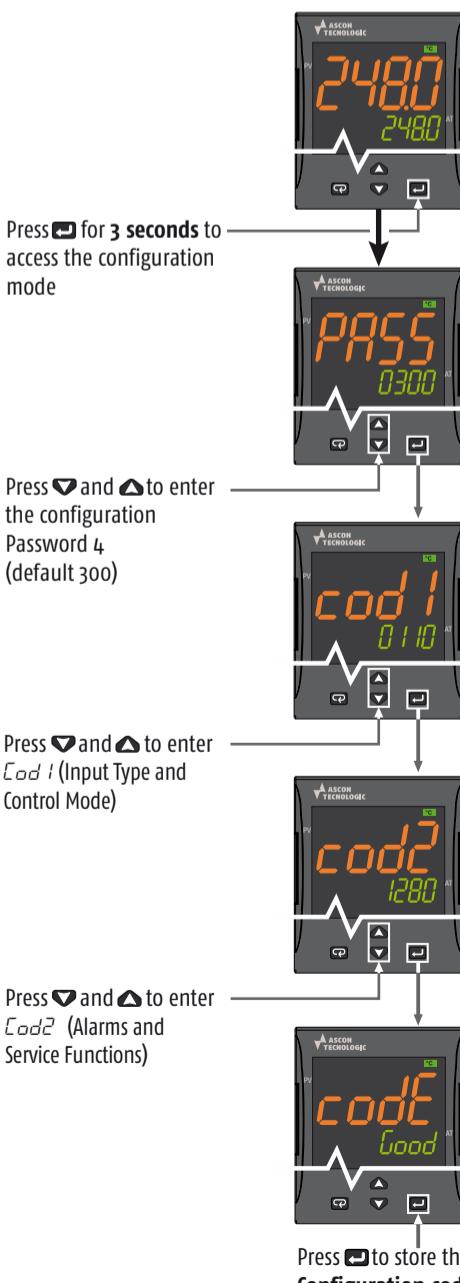

Model: KX1 A B C D E F G H I - 0 0 0 0

Line	KX	1
Optional functions	A	
None	-	
Timer	T	
Power Supply	B	
100... 240Vac (-15... +10%)	H	
24Vac (-25... +12%) or 24Vdc (-15... +25%)	L	
Input	C	
TC, PT100, PT1000, mA, mV, V + Digital Input 1	C	
TC, NTC, PTC, mA, mV, V + Digital Input 1	E	
Output OP1	D	
Relay (1 SPST NO, 4 A/250 Vac)	R	
VDC for SSR (12 Vdc/20 mA)	O	
Output OP2	E	
None	-	
Relay (1 SPST NO, 2 A/250 Vac)	R	
VDC for SSR (12 Vdc/20 mA)	O	

Output OP3	F
None	-
Relay (1 SPST NO, 2 A/250 Vac)	R
VDC for SSR (12 Vdc/20 mA)	O
Output OP4	G
Digital I/O (see the Electrical Connections paragraph for details)	D
Serial Communications	H
TTL	-
RS485 Modbus	S
Terminal Type	I
Standard (screw type non removable terminal blocks)	-
With plug-in screw type terminal blocks	E
With plug-in clamp type terminal blocks	M
With plug-in terminal blocks (fixed part only)	N

Model Code example: KX1-HCRRRD--
Controller KX1, no timer, 100... 240 Vac, TC/PT100/PT1000/mV/V +
Digital Input 1, 3 Relay Outputs, Output 4, TTL, Non removable screw
type terminals.

HOW TO SET THE CONFIGURATION CODE

DECLARATION OF CONFORMITY AND MANUAL RETRIEVAL

KX1 is a panel mounting, Class II instrument. It has been designed with compliance to the European Directives. All information about the controller use can be found in the Engineering Manual: ISTR-MKX_x-ENGox ("x" is the revision). The Declaration of Conformity and the manual of the controller can be downloaded (free of charge) from the web-site: www.ascontecnologic.com

Once connected to the web-site, search: KX1 then click on KX1.

In the lower part of the product page (in any language) is present the download area with links to the documents available for the controller (in the available languages).

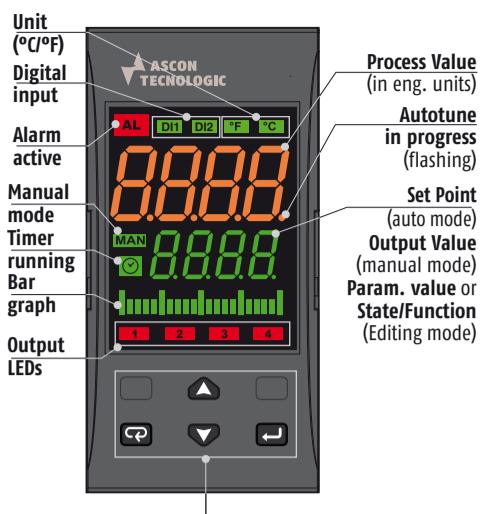

⚠ Warning!

- Whenever a failure or a malfunction of the device may cause dangerous situations for persons, things or animals, please remember that the plant must be equipped with additional devices which will guarantee safety.
- We warrant that the products will be free from defects in material and workmanship for 18 months from the date of delivery. Products and components that are subject to wear due to conditions of use, service life and misuse are not covered by this warranty.

Disposal

The appliance (or the product) must be disposed of separately in compliance with the local standards in force on waste disposal.

DISPLAY AND KEYS

DIMENSIONS

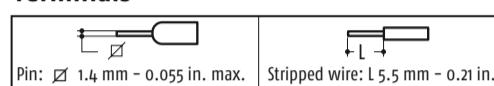

Overall dimensions (W x H x D): 48 x 96 x 75.9 mm (1.89 x 3.78 x 2.99 in.)

Panel Cut-out (W x H): 45^{0.6} x 89^{0.6} mm (1.78^{0.023} x 3.50^{0.023} in.)

Operator Mode	Editing Mode
Access to: - Operator Commands - Parameters - Configuration	Confirm and go to Next parameter
Access to: - Operator additional information - Set Point	Increase the displayed value/Selects the parameters list next element
Access to: - Set Point	Decrease the displayed value or select the previous element
Programmable key: Start the programmed function (Autotune, Auto/Man, Timer ...)	Exit from Operator commands/Parameter setting/Configuration
+ These 2 keys, pressed in sequence, allow to toggle between MANual and AUTO modes.	

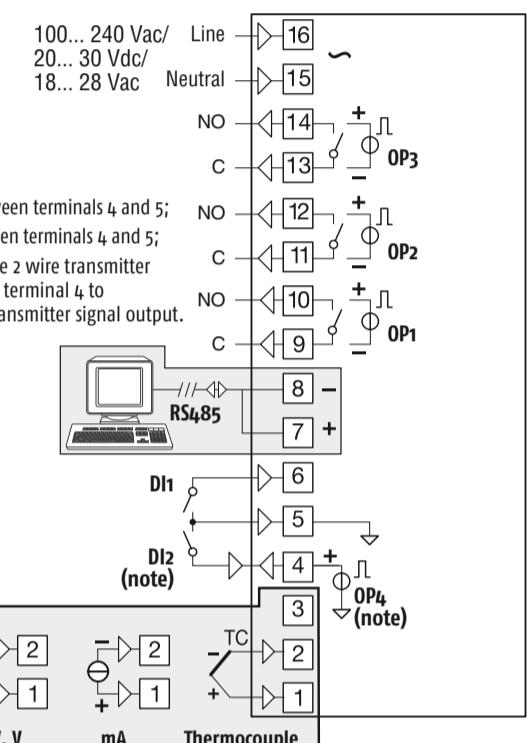

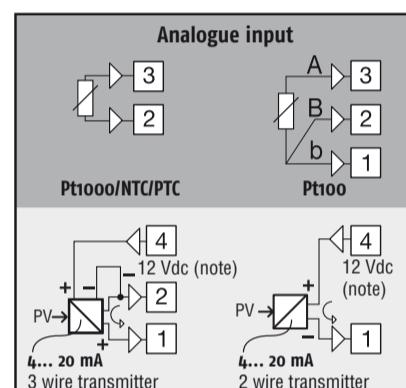

ELECTRICAL CONNECTIONS

Terminals

Note: Terminal 4 can be programmed as:

- Digital Input (DI2) connecting a free of voltage contact between terminals 4 and 5;
- 0... 12 V SSR Drive Output (OP4) connecting the load between terminals 4 and 5;
- 12 Vdc (20 mA) transmitter power supply connecting the 2 wire transmitter between terminals 4 and 1; for 3 wire transmitter connect terminal 4 to transmitter power supply input and terminal 1 and 2 to transmitter signal output.

CONFIGURATION CODE

The KX1 can be easily configured by the "Code Configuration" method for the most common requirements, just entering two 4-digit codes: **Cod1** [LMNO] for the Input Type and Control Mode selection and **Cod2** [PQRS] for the Alarms and the Service Functions. For complete controller configuration see the Engineering Manual.

Note: Before starting the configuration code setting, please define and write down **Cod1** and **Cod2** as needed:

Note: As default, when the alarms are active, only AL1 threshold is available at "Operator Command" level to perform non critical tasks. To protect the AL2 and AL3 thresholds against undesired changes, they are available only at "Parameters list" level (password: 20). For different configurations, see the Engineering Manual.

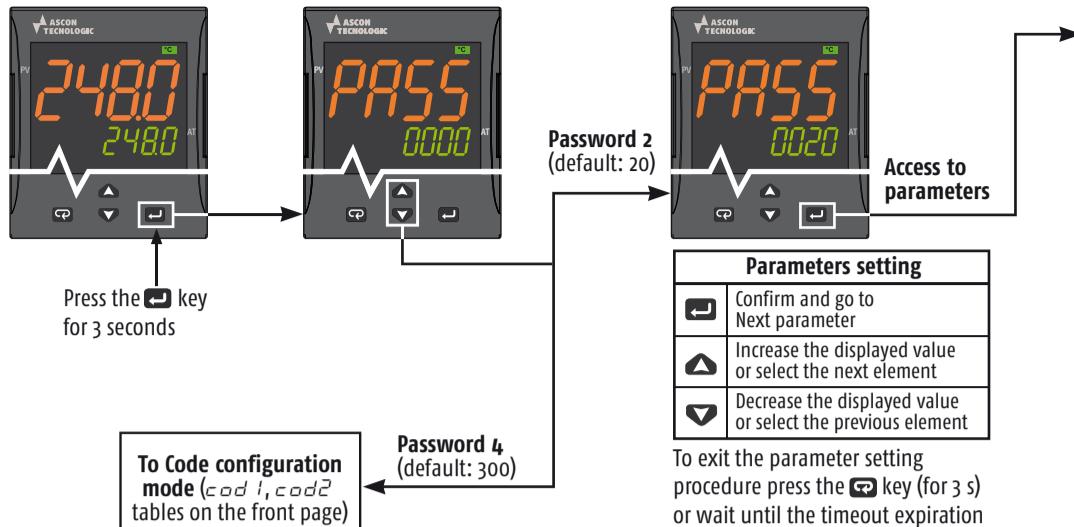

1. Wattmeter Instantaneous power is continuously computed as multiplication of the Load Voltage, Load Current parameter values and the **SP** output instantaneous value.
2. Wattmeter power consumption is the estimated hourly energy consumption (using Load Voltage and Load Current parameter values), computed on the previous 15 minutes period. The readout is updated every 15 minutes.
3. Worked Time counter is continuously increased when the controller is turned ON.
