High display accuracy

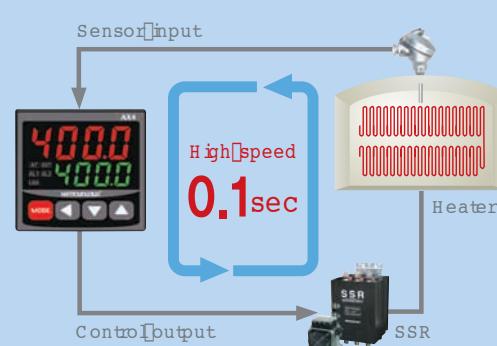

Upgraded the display accuracy to the $\pm 0.3\%$ of F.S (Full Scale)

$\pm 0.3\%$ of F.S

High speed sampling cycle

Performs more precise temperature controlling by the high speed sampling cycle (0.1s)

0.1s

0.1 °C / 0.1 °F decimal point indication

Able to select either Celsius (°C) or Fahrenheit (°F) for temperature display by the internal parameter selection

0.1 °C / 0.1 °F

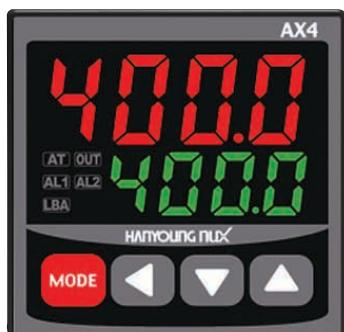

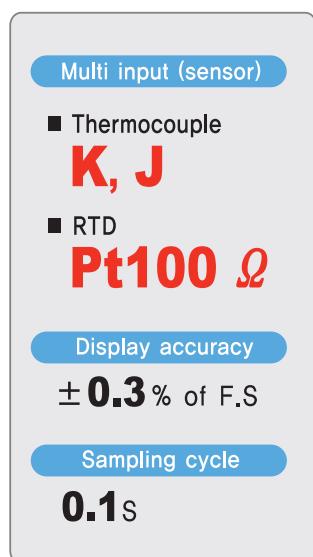

AX Series

Digital Temperature Controller

Actualized the economical price, convenient functions, high speed sampling and highly accurate temperature controlling.

We pursued the convenience for customers by summarizing the standard functions.
Also, we actualized the highly accurate temperature controlling by applying the faster sampling cycle.

Simple selection

Control output type

- Relay output 3 contacts (selectable among the control output/alarm1/alarm2/LBA)
- SSR output 1 contact (Built in as standard)
※ Relay output can have maximum 3 contacts which can be selected as control output, alarm1 output, alarm2 output and LBA output.

Control method

PID control by auto-tuning or on-off control.

Control output operation

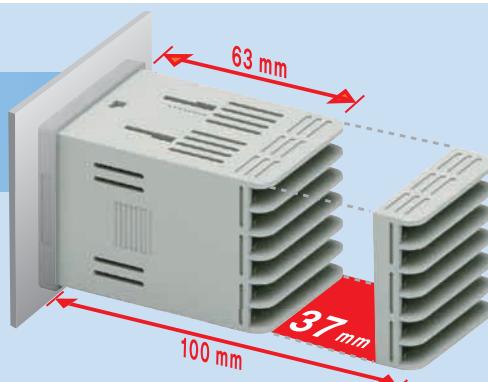

Reverse operation (heating control)/direct operation (cooling control) selectable by the internal parameter.

Display function

- Display the process value (PV) and set value (SV) together at the same time (4 digits)
- Display temperature in Celsius (°C)/Fahrenheit (°F)
- Display the position of decimal point (0.1/1 selectable)

Actualized the installation depth as 63 mm.

AX Series It allowed users to minimize the installation space by designing the installation depth as 63 mm. Due to the fact, it can be corresponded to the minimization of control panel and control box.

Digital Temperature Controller

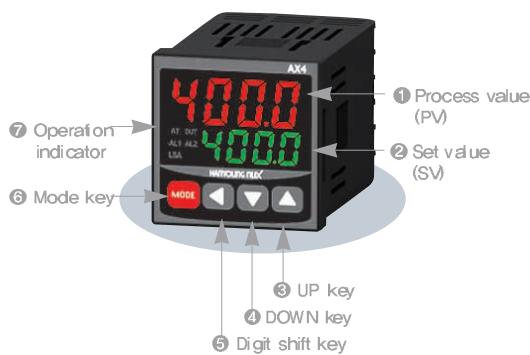

- ▶ Multi input
(K, J and Pt100 Ω are selectable)
- ▶ Multi output
(Relay and SSR are selectable)
- ▶ High speed sampling cycle (0.1 sec)
- ▶ Installation depth : 63 mm
- ▶ Control output selectable:
Reverse operation / Direct operation
- ▶ P.I.D auto tuning
- ▶ Control loop break alarm (LBA)

* Relay output is operated as control output, alarm output or LBA output depending on the internal parameter.

» Name of each parts and function

NO.	Name	Information
①	Process value (PV)	Display the current temperature on operation screen
②	Set value (SV)	Display the set temperature on operation screen
③	UP key	Change the operation screen, increase the set value and move to the parameter set mode
④	DOWN key	Decrease the set value and move to the parameter set mode
⑤	Digit shift key	Shift the digit of set value Move among the operation screen, user setting mode and engineer setting mode
⑥	Mode key	Move among the operation screen, user setting mode and engineer setting mode
⑦	Operation indicator	ON when PID auto-tuning is operated ON when control output is operated ON when alarm1 is operated ON when alarm2 is operated ON when LBA is operated
