### Wiring diagram

### Functional principle

The measuring principle of linear position sensors is based on RLC coupling between the positioning element and the sensor, whereby an output signal is provided proportional to the position of the positioning element. The rugged sensors are wear and tear-free, thanks to the contactless operating principle. They convince through their excellent repeatability, resolution and linearity within a broad temperature range. The innovative technology ensures a high immunity to electromagnetic DC and AC fields.

## Mounting instructions

### Mounting instructions/Description

Extensive mounting accessories provide various options for installation.

The positioning element can be mounted offset by 90° degrees. This provides highest mounting flexibility. The linear position sensor can also be mounted offset by 90° degrees with the two provided screw joints. The measuring principle of RLC coupling makes the sensor immune to magnetized metal splinters and other interference fields.

LED indicates status:

Green:  
Sensor is supplied correctly

LED indicates measuring range

Green:  
Positioning element is in the measuring range  
Green flashing:  
Positioning element is in the measuring range, signal low (e.g. distance too large)

LED OFF:  
Positioning element is outside the coverage

Teaching

The start and end point of the measuring range are set by pressing the button at the teach adapter. Moreover there is the possibility to invert the course of the output curve.

Bridge pin 5 and pin 1 for 10 s (UB) = factory setting  
 Bridge pin 5 and pin 3 for 10 s (GND) = factory setting inverted  
 Bridge pin 5 and pin 3 for 2 s (GND) = sets start value of measuring range  
 Bridge pin 5 and pin 1 for 2 s (UB) = sets end value of measuring range
