The ideal profile system

MayTec offers a comprehensive, harmonised profile system. All profiles can be combined in any way conceivable.

The accessories provide functional and aesthetic solutions for a wide range of applications.

Service

The MayTec service is as versatile as the MayTec profile system.

You may choose:

- delivery of standard elements ex-factory
- delivery of profiles and accessories cut to size according to parts list for customer's assembly
- delivery of pre-fitted modular components
- delivery of completely assembled units
- assembly at your premises

Implementation

The MayTec profile system is easy to process and quick to assemble. Its flexible and modular construction means it can be easily modified and is reusable at any time.

An experienced team will support you in implementing the MayTec system, tailored to your individual applications, taking into consideration your dimensions, loading capacity and stability.

General

Profile group

16 mm, 20 mm, 30 mm, 40 mm, 45 mm, 50 mm, 60 mm

The profiles of the MayTec Profile System are divided into seven **profile groups (PG)**. They can be determined by the basic measure of each profile.

Slot

H-slot, F-slot, E-slot

In order to connect the profiles or to mount accessories the profiles have slots. The MayTec Slot System (☞ 1.02) distinguishes between the three slot types H-slot, F-slot and E-slot, whereas E-slot exists as **E3-slot** and **E4-slot** (3 or 4 mm wall thickness).

Symbols

Many articles (fastening elements, accessories and tools) can only be used especially for individual profile groups or slot types.

In this case these articles are marked with the corresponding symbols.

Profile group

dark symbol: suitable for the corresponding profile group

light symbol: not suitable

Slot type

dark symbol: suitable for the corresponding slot type

light symbol: not suitable

Remark

The symbol for the E-slot is used, if the article is (un)suitable for the two slot types E3 and E4.

Cut

These articles are offered with cut.

Stainless steel

These articles are made of stainless steel.

Cleanroom

These articles are suitable for the use in and around cleanrooms.

Profile tolerance
(Excerpt from DIN EN 12020-2)

Nominal dimensions:

The dimension deviation depends on the precision with which the tooling is manufactured, the tooling wear and the variation during the extrusion process. For one manufacturing setup the variation within one profile is 0.01 mm.

Profile tolerance		
Dim. range in mm from	to	Tolerance in mm
-	10	± 0.15
10	15	± 0.20
15	30	± 0.25
30	45	± 0.30
45	60	± 0.40
60	90	± 0.45
90	120	± 0.60
120	150	± 0.80
150	180	± 1.00
180	240	± 1.20
240	300	± 1.50

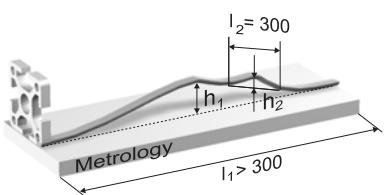

Flatness of profile surfaces

In order to optimize the connection stability, all profile surfaces are designed and manufactured with concave surfaces. This assures that the assembled profiles contact on the outer edges only (line of contact).

When tightening the connectors the slot flanks will be drawn to the mounting profile within the elastic range and will keep the connectors under tension.

Straightness tolerance
of the edge in longitudinal direction

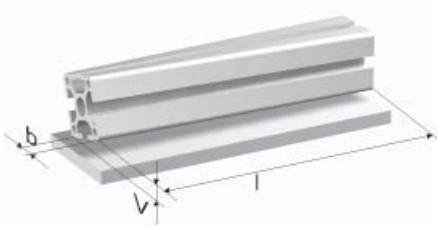

At a certain length l_1 the given tolerance h_1 is not to be exceeded.

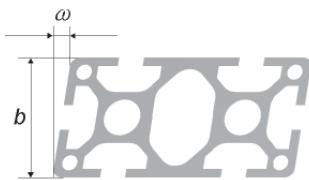

For each incremental length of $l_2 = 300$ mm the deviation h_2 is not to exceed 0.3 mm.

Straightness tolerance		
Length l_1 in m from	to	Tolerance h_1 in mm
-	1	0.7

Parallelism tolerance
 (Angular tolerance)

The parallelism tolerance ω (angular tolerance) refers to unequal sides to the shorter side of the angle, i.e. it is measured from the longer side.

Parallelism tolerance

Bending strength

For the computation of deflection use formulas on this page.

For the computation of deflection by the profiles own weight, apply "Type of load" 3, 6 or 9.

f = Deflection in mm
 F = Type of load in N
 l = Profile length in mm
 J = Moment of inertia in mm⁴
 E = Module of elasticity in N/mm²
 E_{AL} = 70,000 N/mm²

1) Comments

- Catalogue data in cm⁴
(Note factor of conversion 104 !)
- The moments of inertia of a certain profile are listed on the respective profile page (→ 1.09, 1.10, 1.11) and in the tables 1.1D

Type of load		
1		$f = \frac{F \cdot l^3}{3E \cdot J}$
2		$f = \frac{F \cdot l^3 + F_1 \cdot l_1^2 \cdot l + F_2 \cdot l_2^2 \cdot l}{3E \cdot J}$
3		$f = \frac{F \cdot l^3}{8E \cdot J}$
4		$f = \frac{F \cdot l^3}{48E \cdot J}$
5		$f = \frac{F \cdot l^3}{(48 + \frac{29m}{l}) \cdot E \cdot J}$
6		$f = \frac{5F \cdot l^3}{384E \cdot J}$
7		$f = \frac{F \cdot a^2 \cdot b^2}{3E \cdot J \cdot l}$
8		$f = \frac{F \cdot l^3}{192E \cdot J}$
9		$f = \frac{F \cdot l^3}{384E \cdot J}$

Approximate determination of deflection

To determine the approximation of deflection, use the diagram on this page.

Profile length l in mm
Determination of deflection

1. Type of load F in N
2. Profile length l in mm
3. Move cross point on the diagonal
4. Moment of inertia of the selected profile J in cm⁴
5. Cross point with the diagonal to be vertically extended to the bottom
6. Deflection f for the specific "Type of load" in mm

Profile combinations

With the MayTec Connector System it is possible to make a multitude of form-matching and stable profile combinations.

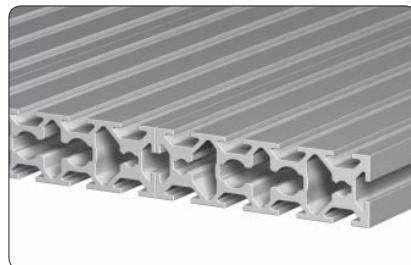

Special slits

Panel elements can be set in the profile flush to the outer edge for form-matching design. The slits needed for that can be made in nearly all profiles.

The proven connection system!

The MayTec quick-connection system allows combination of all MayTec profiles in any way imaginable.

It carries same stability out after all four sides.

The connection allows:

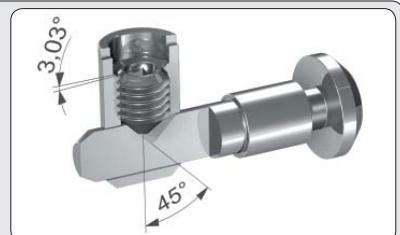

- easy machining
- quick assembly
- innumerable (dis)assemblies

The connection system is:

- complete
- stable
- functional

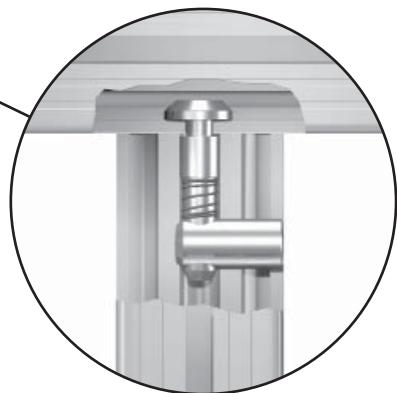

Vibration proof

The different direction angles of lead of thread and clamping cone prevent the loosening of the connection by vibration.

MayTec connector with square head

The MayTec connector with square head offers the highest load bearing capacity.

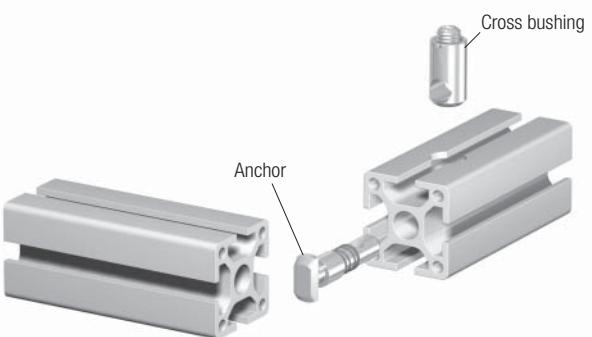

MayTec universal-connector

The MayTec universal-connector allows:

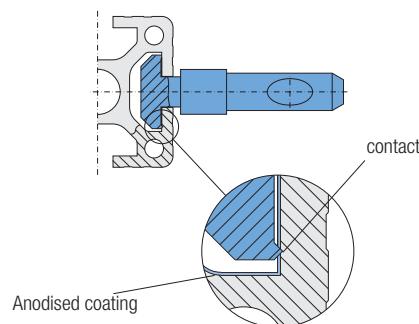

- any desired position of profiles
- only one type for 0° and 90° position of cross bushing
- simple determination of the connector type
- minimisation of stock keeping

MayTec standard-connector

The MayTec standard-connector allows subsequent front-sided mounting or dismounting in any location.

MayTec ground-connector for potential equalisation

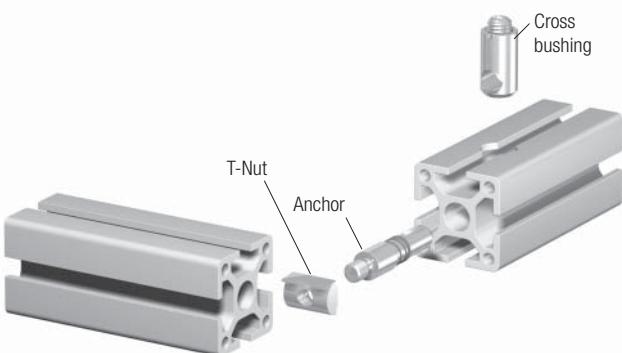

The MayTec ground-connector allows potential equalisation between two profiles. When the connector is tightened, the serration at the rear of the anchor head penetrates the anodised profile coating and thus provides an electrical contact.

Machining of profiles with core hole-Ø 6 mm for miter

In order not to reduce the strength of the miter joint one profile end must be counterbored

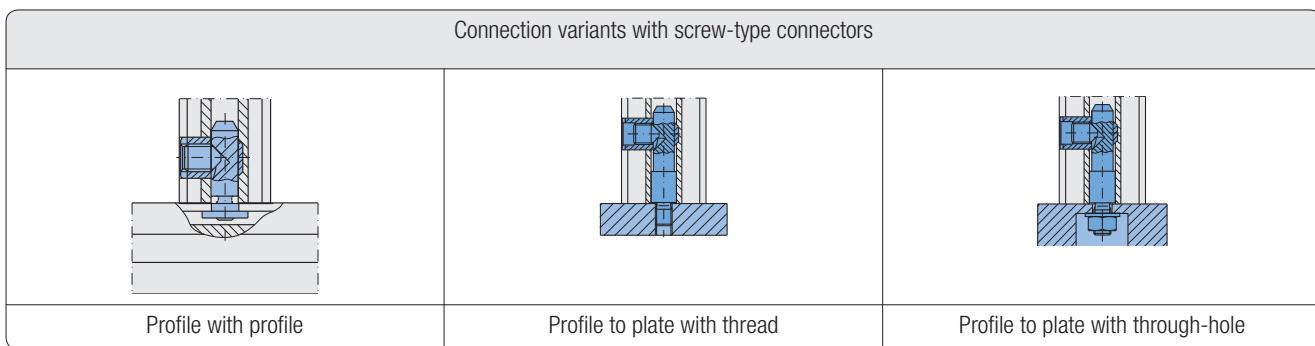

The center portion of the anchor part is to be located in the counterbored profile section

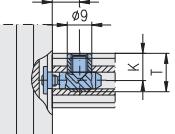

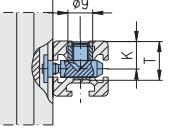

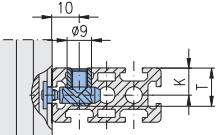

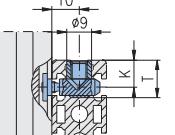

Comments

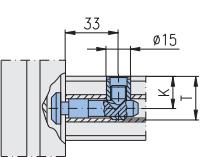

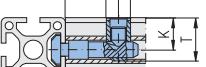

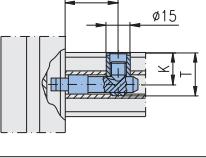

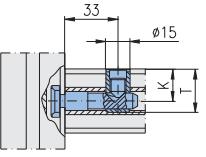

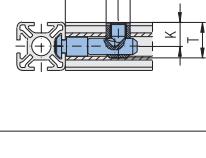

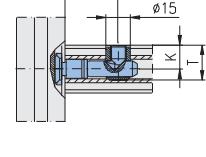

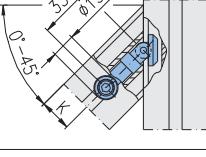

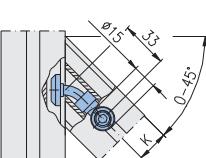

Use drill for miter anchor Article-No.: 1.99.0310800  tools 1.99

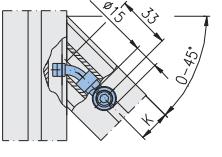

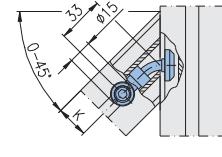

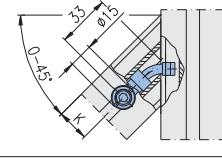

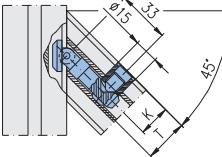

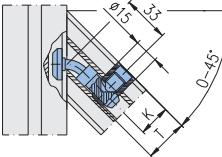

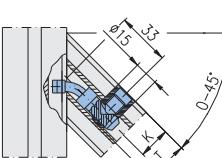

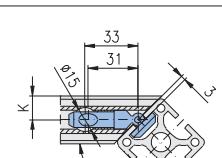

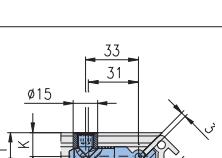

Mounting instruction for screw-type connectors

1. Screw anchor in until it stops against the shoulder 2. Unscrew anchor until it lines-up with the cross bushing position (max. one turn) 3. Set up profile with cross bushing

Application

Connector for mounting into E-slot and for connection of profiles 30×150
Alternative connection possibility
☞ *Universal connector, 110*

Application

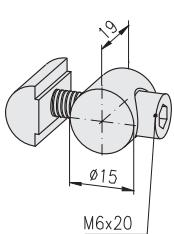

ST-Connector for later insertion of profiles into closed frames

Assembly

- ① push the profile into the frame
- ② insert and rotate the T-Nut, pretension the screw (and cross bushing)
- ③ push the connector into the cross bushing bore, tighten the screw

Insertion connector**Application**

Connection without profile machining.
Suitable for the connection of profiles with E-slots to profiles with E- or F-slots.

**Application**

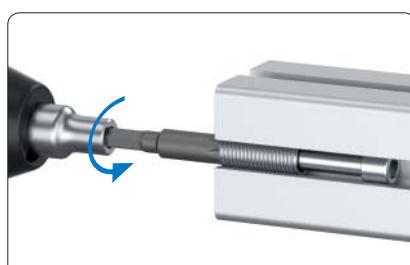

Suitable for the subsequent mounting of profiles

Pre-assembly of the threaded sleeve

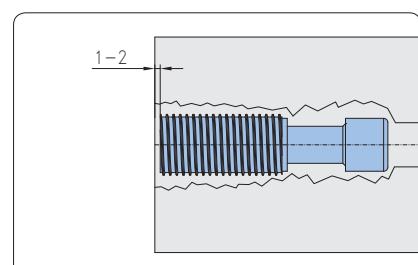

threaded sleeve with screw

insert the sleeve with screw into the slot

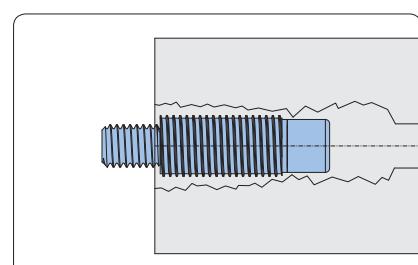

screw in the sleeve

end position of the sleeve

press the screw with a screwdriver through the sleeve

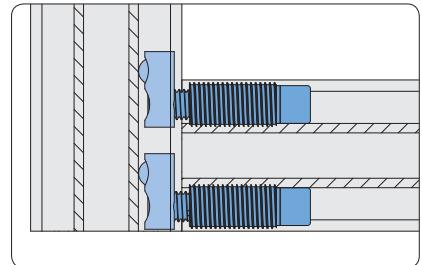

end position of the screw

Final assembly

Insertion connector with T-Nut

insert T-Nut in slot of the opposition profile
and tighten screw

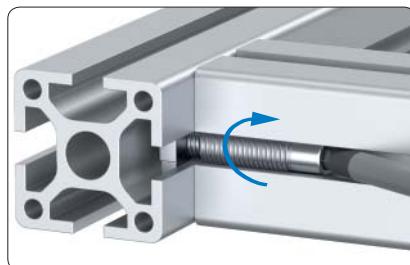

T-Nut for subs. insertion w. spring ball, E, M8;
either with one or two connectors

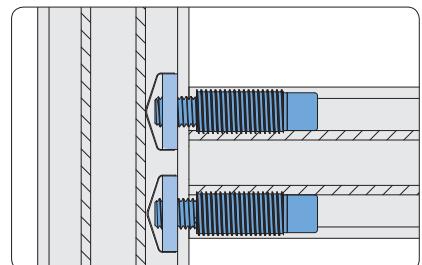

Optional
clip on the connector cover

Final assembly

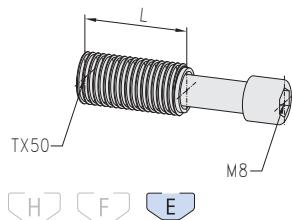

Insertion connector with threaded plate

insert threaded plate in slot of the opposition
profile and tighten screw

Subsequent mounting of profiles

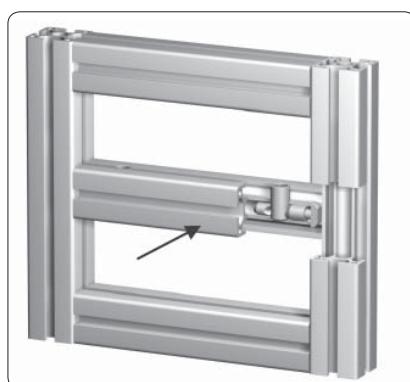

Step by step instruction for subsequent mounting of profiles with two standard connections for all profile groups

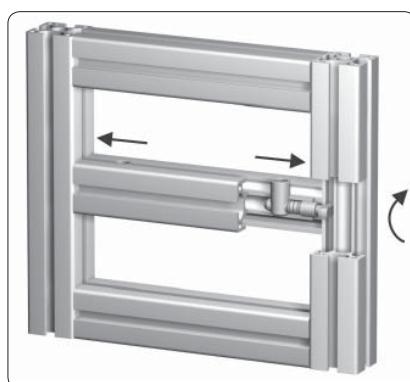

For the subsequent mounting of the profile:

1. Mill on both ends a slot size of 6×8 mm.

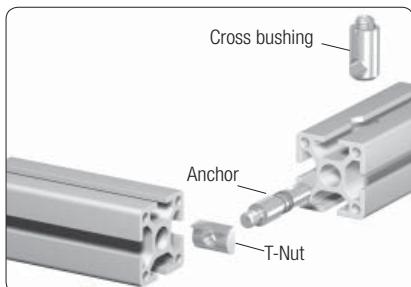

2. Mount connector and fix anchor in front position with setscrew.

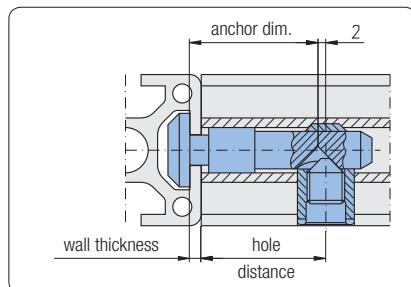

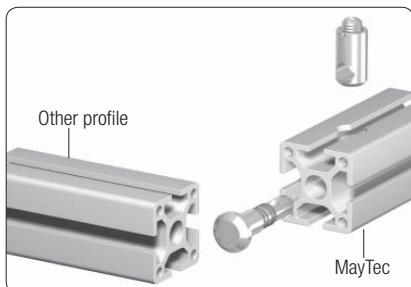

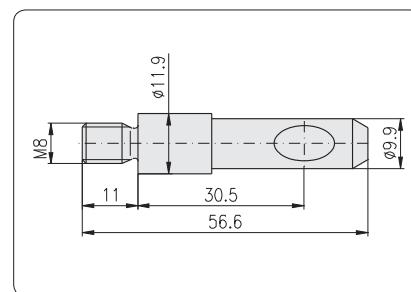

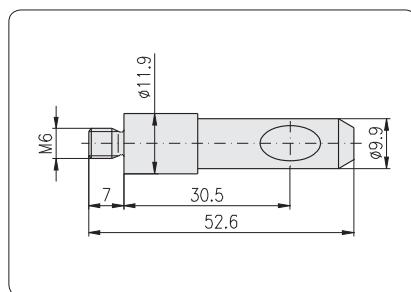

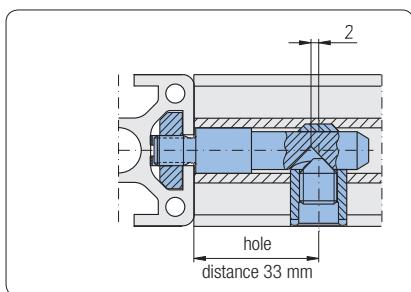

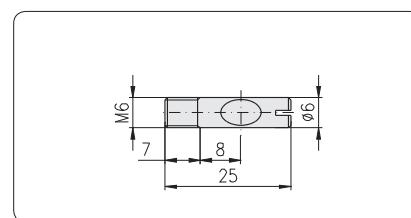

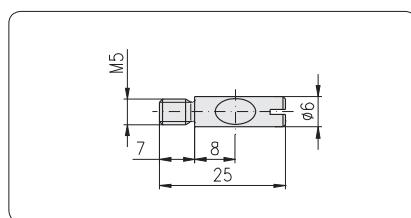

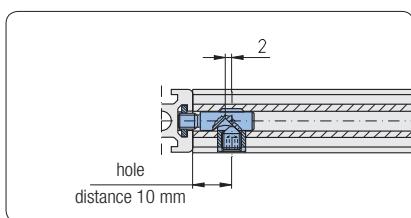

3. Mount profile.
4. Loosen setscrew.
Due to the compressing spring the anchor is pushed into the slot.
Turn anchor by 90° with screw driver.
Fasten setscrew.

Connection of MayTec with other profile systems

MayTec profiles can easily be combined with other profile systems.

With the MayTec Screw-type connector and the T-Nut of the other profile system

With the MayTec Standard-connector two points have to be considered:

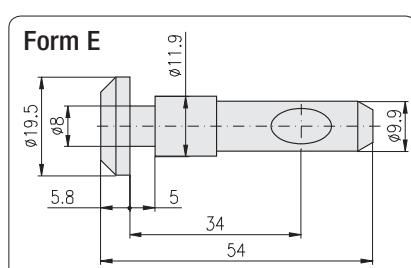

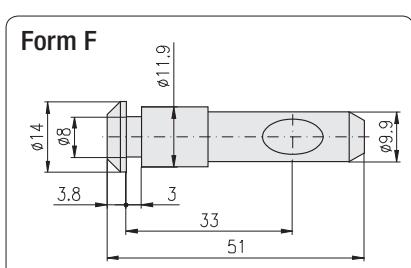

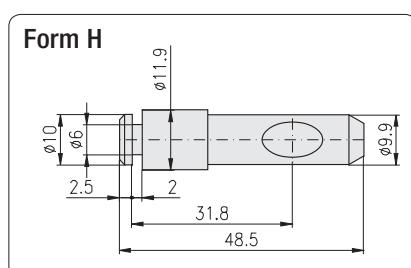

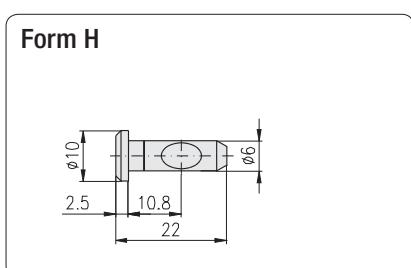

1. Anchor head-form and size

The MayTec system provides 3 anchor head sizes. If any of the sizes don't fit into the slots of other profile systems, the anchor head can be made to fit as required.

2. Hole distance

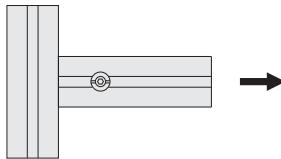

During the machining of the cross bore the hole distance has to match the wall thickness of the profile.

$$\text{hole distance} = \text{anchor dim.} - \text{wall thickness} + 2 \text{ mm}$$

**Rhomboid T-slot nuts
with self-locking**

Application

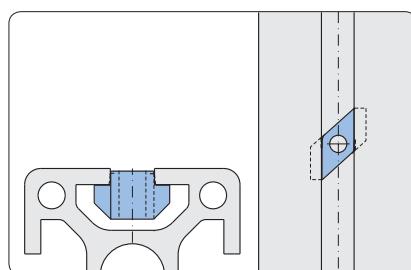

For pre-assembly of threads in the profile slot

Assembly

Pre-assemble the rhomboid T-slot nut onto the screw, and insert into the slot

By tightening the screw, the rhomboid T-slot nut is turned 50° and jammed inside the slot with its conical flanks

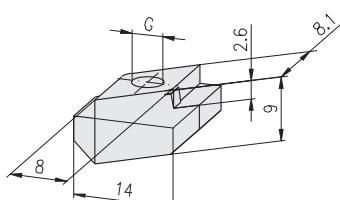

Even after loosening the screw, the rhomboid T-slot nut will remain wedged in place

Combination profiles PVC

Application

Combination profiles for sliding profiles alternatively suitable as:

- reducing profile
- cover profile
- Inserted plate (only combination profile 1.41.330)

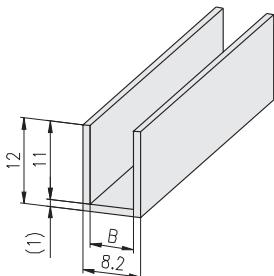

Inserted plate for sliding profile 30×26:
combination profile 1.41.330

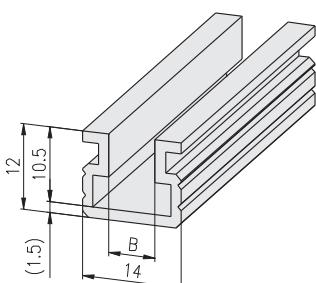

Inserted plate for sliding profile 50×14:
for sliding profile 1.41.11.1, 1.41.11.2

Guide profile PVC

Application

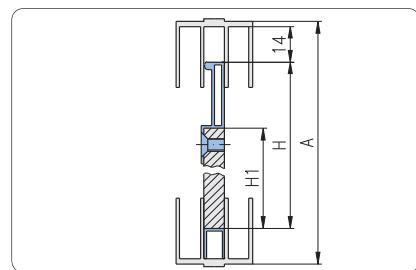

- The guide profile is necessary
- for demountable sliding doors
 - for the use of panel elements of each plate thickness from 1 mm to 14 mm

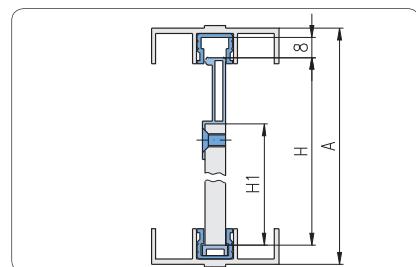

Drill dimensions

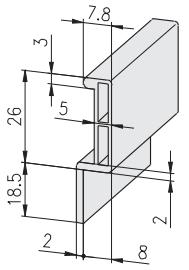

Minimum height for lifting of the panel elements

Use in sliding profile 30×26

Use in sliding profile 50×14 with combination profile

Framing profiles

Application

The framing profile allows the installation of panels in closed frames

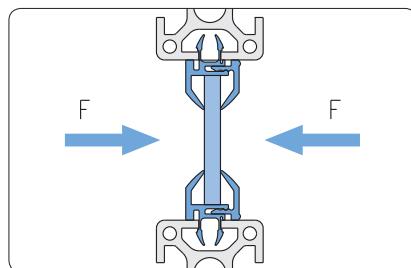

Assembly

1. Insert base profile in profile slot
2. Put panel element in position
3. Push clamping strip in position

Comments

The clamping strip is badge by a bulge as a distinctive mark to the base profile

Maximum loading of framing profile:

$$F_{\max} = 200 \text{ N/m}$$

For maximum loading of element be aware of the stability of used framing profile

Roller fastening sets type A

Roller fastening set type A, one-sided

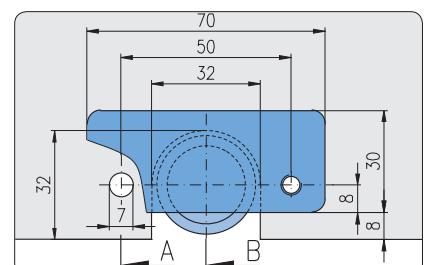

Roller fastening set type A, double-sided

Mounting on top side

Application

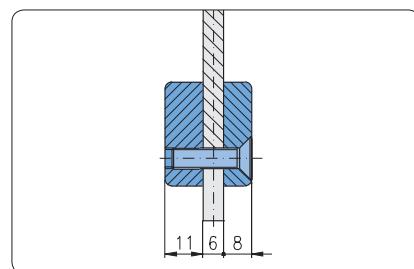

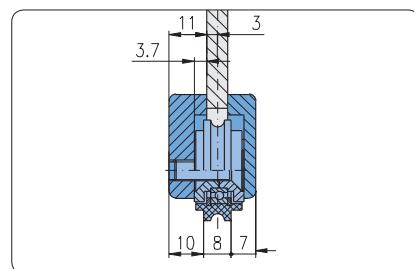

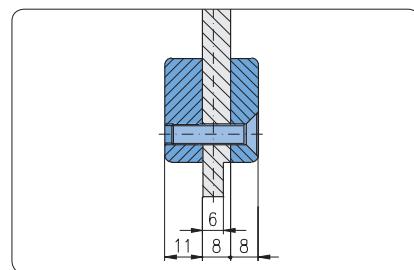

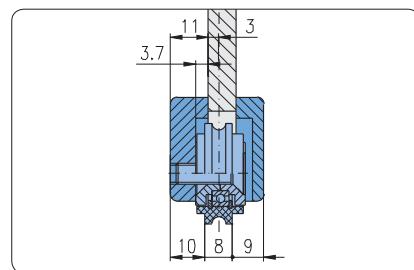

The roller fastening set allows the mounting of the roller into the panel element. Thus the panel element fits in the slot and fills the frame completely

Mounting on bottom side

Comments

The elongated hole in the panel element allows the adjustment of the height tolerance

Potential equalisation

Application

Ground connections to establish the potential equalisation between two profiles

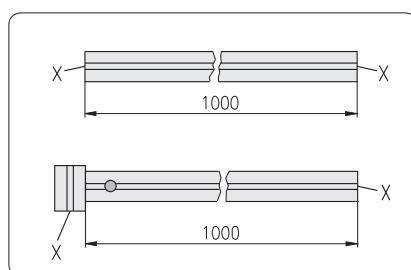

The serration at the bottom of the socket head of the connector pushes through the anodised coating of the profiles and thus provides the electrical contact

Comments

Suitable to equalise charge accumulations
Not suitable for higher currents

Technical data

Low current measurements in accordance with DIN VDE 0413, Part 4 for the control of protective circuits, earthing circuits and potential equalisation methods through low resistance connections for protection against dangerous currents

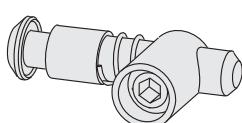

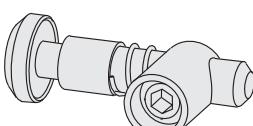

Resistance values with DC current of more than 200 mA with 1.0 m alu-profile

Self locking washers DIN 25201

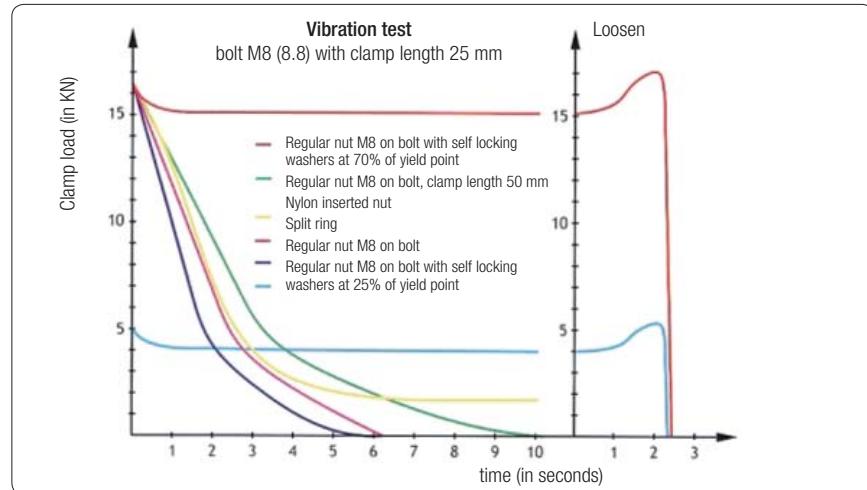

Advantages

- Maximum safety during the tightening of the screw
- Reliable connection under extreme vibration and dynamic loads
- Ease of assembly and disassembly
- Positive locking at low and high preload levels
- Same temperature characteristics as standard nut & bolt
- Surface protection
- Reusable

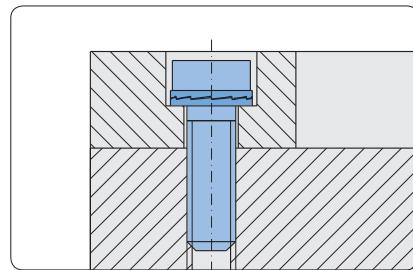

The outside dimensions of the locking washer guarantees its effectiveness even when used in countersunk holes. Washers with enlarged outer diameter (SP) in combination with flanged nuts / bolts are recommended for use on large / long holes, painted surfaces or soft materials, e.g. aluminium.
