1756 ControlLogix Controllers

The ControlLogix® controller provides a scalable controller solution that is capable of addressing a large amount of I/O points. You can place the ControlLogix controller into any slot of a ControlLogix I/O chassis, and install multiple controllers in the same chassis.

ControlLogix controllers can monitor and control I/O across the ControlLogix backplane, as well as over network links. The ControlLogix 5580 controllers have an embedded Ethernet port for a direct connection to Ethernet-enabled devices and networks, and also support communication interface modules in the local chassis. To provide communication for ControlLogix 5570 or ControlLogix 5560 controllers, install the appropriate communication interface module into the local chassis.

ControlLogix 5580 Controllers Features and Specifications

| Feature | 1756-L83E | 1756-L85E |
|--|---|-----------|
| Controller tasks | 32 tasks 1000 programs/task Local I/O event triggers: No limit | |
| Built-in communication ports | 1 port USB ⁽¹⁾ Embedded Ethernet port | |
| USB port communication | USB 2.0 Full speed (12 Mbps) Programming, configuration, firmware flash and on-line edits only | |
| Ethernet performance | 10/100/1000 Mbps | |
| Communication options | <ul style="list-style-type: none"> • EtherNet/IP™ • ControlNet™ • DeviceNet™ • Data Highway Plus™ • Remote I/O • SynchLink™ • Third-party process and device networks | |
| EtherNet/IP nodes supported, max | 100 nodes | 300 nodes |
| Network connections, per network module located in the local chassis | <ul style="list-style-type: none"> • See "EtherNet/IP nodes supported, max" (ControlLogix 5580 Controllers) • 256 EtherNet/IP; 128 TCP (1756-EN2x) • 128 EtherNet/IP; 64 TCP (1756-ENBT) • 100 ControlNet (1756-CN2/A) • 40 ControlNet (1756-CN2/D, 1756-CN2/E) • 128 ControlNet (1756-CN2/B) | |
| Controller redundancy | N/A | |
| Integrated motion | <ul style="list-style-type: none"> • EtherNet/IP (CIP Motion) | |
| Programming languages | <ul style="list-style-type: none"> • Relay Ladder • Structured Text • Function Block Diagram • Sequential Function Chart (SFC) | |

(1) The USB port is intended for temporary local programming purposes only and not intended for permanent connection. Do not use the USB port in hazardous locations.

Series 12 Template Version 12.0.1 / Series 12 Template Version 12.0.1A

Technical Specifications - ControlLogix 5580 Controllers

| Attribute | 1756-L83E | 1756-L85E |
|-------------------------------------|---|-----------|
| User memory | 10 MB | 40 MB |
| Digital I/O, max | 128,000 | |
| Analog I/O, max | 4000 | |
| Total I/O, max | 128,000 | |
| Optional nonvolatile memory storage | 2 GB Secure Digital Card (1784-SD2), ships pre-installed in the controller | |
| Energy storage module | Embedded in controller, nonremovable | |
| Current draw @ 1.2V DC | 5.0 mA | |
| Current draw @ 5.1V DC | 1.20 A | |
| Power dissipation | 6.2 W | |
| Thermal dissipation | 8.5 BTU/hr | |
| Isolation voltage | 50V (continuous), Basic Insulation type, USB port to backplane, Ethernet port to backplane, and USB port to Ethernet port Type tested at 1000V AC for 60 seconds | |
| Weight, approx | 0.394 kg (.868 lb) | |
| Slot width | 1 | |
| Module location | Chassis-based, any slot | |
| Chassis | 1756-A4, 1756-A7, 1756-A10, 1756-A13, 1756-A17 Series B, Series C | |
| Power supply, standard | 1756-PA72, 1756-PA75, 1756-PB72, 1756-PB75, 1756-PH75, 1756-PC75 | |
| Power supply, redundant | 1756-PA75R, 1756-PB75R, 1756-PSCA2 | |
| Wire category ⁽¹⁾ | 3 - on USB port 2 - on Ethernet ports | |
| Wire size | Ethernet cabling and installation according to IEC 61918 and IEC 61784-5-2 | |
| North American temperature code | T4 | |
| ATEX temperature code | T4 | |
| IECEx temperature code | T4 | |
| Enclosure type rating | None (open-style) | |

(1) Use this conductor category information for planning conductor routing. Refer to Industrial Automation Wiring and Grounding Guidelines, publication [1770-4.1](#).

Environmental Specifications - ControlLogix 5580 Controllers

| Attribute | 1756-L83E, 1756-L85E |
|--|--|
| Temperature, operating IEC 60068-2-1 (Test Ad, Operating Cold), IEC 60068-2-2 (Test Bd, Operating Dry Heat), IEC 60068-2-14 (Test Nb, Operating Thermal Shock) | Chassis series C: $0^{\circ}\text{C} < \text{T}_a < +60^{\circ}\text{C}$ $+32^{\circ}\text{F} < \text{T}_a < +140^{\circ}\text{F}$ Chassis series B: $0^{\circ}\text{C} < \text{T}_a < +50^{\circ}\text{C}$ $+32^{\circ}\text{F} < \text{T}_a < +122^{\circ}\text{F}$ |

1756 ControlLogix-XT Controllers

The ControlLogix-XT™ controllers function in the same way as the traditional ControlLogix controllers. The ControlLogix-XT products include control and communication system components that are conformally coated for extended protection in harsh, corrosive environments:

- When used with FLEX I/O-XT™ products, the ControlLogix-XT system can withstand temperature ranges from -20...70 °C (-4...158 °F).
- When used independently, the ControlLogix-XT system can withstand temperature ranges from -25...70 °C (-13...158 °F).
- Equipment designated as ‘LXT’ is certified for use only within a surrounding air temperature of -25...60 °C (-13...140 °F) even when used with other ‘XT’ equipment.

1756-L73XT ControlLogix Controller Specifications

Technical Specifications - 1756-L73XT ControlLogix Controller

| Attribute | 1756-L73XT |
|---------------------------------|--|
| User memory | 8 MB |
| I/O memory | 0.98 MB |
| Optional nonvolatile memory | 1 GB (1784-SD1 ships with every controller) 2 GB (1784-SD) |
| Digital I/O, max | 128,000 |
| Analog I/O, max | 4000 |
| Total I/O, max | 128,000 |
| Replacement battery | — |
| Energy storage modules | <ul style="list-style-type: none"> • 1756-ESMCAPXT capacitor energy storage module (removable, ships installed with every controller) • 1756-ESMNSEXT capacitor energy storage module (removable, no residual WallClockTime power backup) • 1756-ESMNRMXT capacitor energy storage module (nonremovable, secures controller by preventing USB connection and SD card use) |
| Current draw @ 5.1V DC | 800 mA |
| Current draw @ 1.2V DC | 5 mA |
| Power dissipation | 2.5 W |
| Thermal dissipation | 8.5 BTU/hr |
| Isolation voltage | 30V (continuous), basic insulation type, USB port to backplane Type tested at 500V AC for 60 s |
| USB port ⁽¹⁾ | USB 2.0, full speed (12 Mbps) |
| Weight, approx | 0.25 kg (0.55lb) |
| Slot width | 1 |
| Module location | Chassis-based, any slot |
| Chassis | 1756-A4LXT, 1756-A5XT, 1756-A7LXT, 1756-A7XT |
| Power supply, standard | 1756-PAXT, 1756-PBXT |
| Power supply, redundant | None |
| Wire category ⁽²⁾ | 3 - on USB ports |
| North American temperature code | T4A |
| IEC temperature code | T4 |
| Enclosure type rating | None (open-style) |

(1) The USB port is intended for temporary local programming purposes only and not intended for permanent connection. Do not use the USB port in hazardous locations.

(2) Use this conductor category information for planning conductor routing. Refer to the Industrial Automation Wiring and Grounding Guidelines, publication [1770-4.1](#).

Environmental Specifications - 1756-L73XT ControlLogix Controller

1756 GuardLogix Controllers

A GuardLogix® controller is a ControlLogix controller that also provides safety control. The GuardLogix system is a dual controller solution—you must use a 1756-L6S/1756-L7S primary controller and a 1756-LSP/1756-L7SP safety partner to achieve up to SIL CL 3/PLe/Cat. 4. A major benefit of this system is that it's still a single project, safety and standard together. The safety partner controller is a part of the system, is automatically configured, and requires no user setup.

During development, safety and standard have the same rules; multiple programmers, online editing, and forcing are all allowed. Once the project is tested and ready for final validation, you set the safety task to a SIL 3 integrity level, which is then enforced by the GuardLogix controller. When safety memory is locked and protected, the safety logic can't be modified and all safety functions operate with SIL 3 CL integrity. On the standard side of the GuardLogix controller, all functions operate like a regular Logix controller. Thus, online editing, forcing, and other activities are all allowed.

With this level of integration, safety memory can be read by standard logic and external devices, like HMIs or other controllers, eliminating the need to condition safety memory for use elsewhere. The result is easy system-wide integration and the ability to display safety status on displays or marques. Use Guard I/O™ modules for field device connectivity on Ethernet or DeviceNet networks, and for safety interlocking between GuardLogix controllers use Ethernet or ControlNet networks. Multiple GuardLogix controllers can share safety data for zone to zone interlocking, or a single GuardLogix controller can use remote distributed safety I/O between different cells/areas.

In addition to the standard features of a ControlLogix controller, the GuardLogix controller has these safety-related features.

Features - GuardLogix Controllers

| Feature | 1756-L61S, 1756-L62S, 1756-L63S, 1756-L71S, 1756-L72S, 1756-L73S, 1756-L73SXT |

| KC | Korean Registration of Broadcasting and Communication Equipment, compliant with: Article 58-2 of Radio Waves Act, Clause 3 |
| TÜV certified for functional safety ⁽²⁾ | Capable of Cat. 4/PL e according to EN ISO 13849-1 and SIL 3 according to EN 62061/IEC 61508 when used as described in the GuardLogix Controller Systems Safety Reference Manual, publication 1756-RM093 . |
| UL certified for functional safety ⁽²⁾ | Capable of SIL CL 3, see UL File E256621. |

(1) When marked. See the Product Certification link at <http://www.ab.com> for Declarations of Conformity, Certificates, and other certification details.

(2) When used with specified firmware revision.

1756 GuardLogix-XT Controllers

The GuardLogix-XT™ controllers function the same way as the traditional GuardLogix controllers. The GuardLogix-XT controllers are conformally coated for extended protection in harsh, corrosive environments. The GuardLogix-XT system can withstand temperature ranges from -25...70 °C (-13...158 °F). You must use a 1756-L73SXT primary controller with a 1756-L7SPXT safety partner.

Equipment designated as LXT is certified for use only within a surrounding air temperature of -25...60 °C (-13...140 °F) even when used with other XT equipment.

| Attribute | 1756-L73SXT | 1756-L7SPXT |
|---------------------------------|--|--|
| User memory | 8 MB | — |
| Safety memory | 4 MB | Same as corresponding primary controller |
| I/O memory | 0.98 MB | |
| Digital I/O, max | 128,000 | |
| Analog I/O, max | 4,000 | |
| Total I/O, max | 128,000 | |
| Energy storage modules | <ul style="list-style-type: none"> • 1756-ESMCAPXT capacitor energy storage module extreme temperature (removable, ships installed with every controller) • 1756-ESMNSEXT capacitor energy storage module extreme temperature (removable, no residual WallClockTime power backup) • 1756-ESMNRMXT capacitor energy storage module extreme temperature (nonremovable, secures controller by preventing USB connection and SD card use) | <ul style="list-style-type: none"> • 1756-SPESMNSEXT capacitor energy storage module for the safety partner extreme temperature (removable, no residual WallClockTime power backup) • 1756-SPESMNRMXT capacitor energy storage module for the safety partner extreme temperature (nonremovable, secures controller by preventing USB connection and SD card use) |
| Current draw @ 1.2V DC | 5 mA | |
| Current draw @ 5.1V DC | 800 mA | |
| Power dissipation | 2.5 W | |
| Thermal dissipation | 8.5 BTU/hr | |
| Isolation voltage | 30V (continuous), Basic Insulation, USB port to backplane Type tested at 500V AC for 60 s | |
| Weight, approx | 0.25 kg (0.55lb) | |
| Slot width | 2 (need 2 modules; each uses a slot) | |
| Module location | Chassis-based, any slot (the safety partner must be in a slot to the right of the primary) | |
| Chassis | 1756-A4LXT, 1756-A5XT, 1756-A7LXT, 1756-A7XT | |
| Power supply | 1756-PAXT, 1756-PBXT | |
| Wire category ⁽¹⁾ | 3 - on USB ports | |
| North American temperature code | T4A | |
| IEC temperature code | T4 | |
| Enclosure type rating | None (open-style) | |

(1) Use this conductor category information for planning conductor routing as described in the system level installation manual. See the Industrial Automation Wiring and Grounding Guidelines, publication [1770-4.1](#).

Environmental Specifications - 1756 GuardLogix-XT Controllers

(2) When used with specified firmware revision.

1756 Armor ControlLogix and Armor GuardLogix Controllers

The Armor™ ControlLogix and Armor™ GuardLogix® controllers extend the ControlLogix platform to the On-Machine™ space to put industrial control closer to the application, and sometimes onto the machine itself.

Both controllers provide 4 MB of standard memory capacity for the most demanding applications, while the Armor GuardLogix controller provides an additional 2 MB of safety memory. The Armor GuardLogix controller is certified for use in safety applications up to Safety Integrity Level (SIL) 3 and Performance Level PLe (Category 4), where the de-energized state is the safe state.

Dual independent EtherNet/IP ports and Device-level Ring (DLR) capabilities provide resiliency from loss of network connections due to one connection failure.

The controllers support the same environmental ratings and global certifications as ControlLogix controllers, but now provide Ingress Protection (IP67 and UL Type 4/4x) for dust and washdown protection.

With so many hardware functions in one device, these controllers minimize cabinet hardware, simplify wiring layouts, and allow for the replacement of devices without having to stop production. The controllers do not require tools or specialty personnel for component replacement. These features can help improve Mean Time to Repair (MTTR), simplify troubleshooting, and make system status readily available without having to open a cabinet or visit a control room.

Features - Armor ControlLogix and Armor GuardLogix Controllers

| Feature | 1756-L72EROM Series C | 1756-L72EROMS Series C |
|-----------------------|--|---|
| Communication options | Standard on EtherNet/IP networks | Standard and safety on EtherNet/IP networks |
| Network connections | 256 EtherNet/IP; 128 TCP | |
| Controller redundancy | Not supported | |
| Programming languages | <ul style="list-style-type: none"> • Relay ladder • Structured text • Function block • SFC | Relay ladder with safety application instructions |

1756-L72EROM Armor ControlLogix and 1756-L72EROMS Armor GuardLogix Controller Specifications

Technical Specifications - 1756-L72EROM Armor ControlLogix and 1756-L72EROMS Armor GuardLogix Controllers

| TÜV certified for functional safety ⁽²⁾ | — | Capable of Cat. 4/PL e according to EN ISO 13849-1 and SIL 3 according to EN 62061/IEC 61508 when used as described in the GuardLogix Controller Systems Safety Reference Manual, publication 1756-RM099 . |

(1) When marked. See the Product Certification link at <http://www.ab.com> for Declarations of Conformity, Certificates, and other certification details.

(2) When used with specified firmware revisions.

Controller Memory Use

The following equations provide a rough memory estimate.

| | | | |
|--|----------------|---|------------------------------|
| Controller tasks | _____ x 4000 | = | _____ bytes (minimum 1 task) |
| Digital I/O points | _____ x 400 | = | _____ bytes |
| Analog I/O points | _____ x 2600 | = | _____ bytes |
| DeviceNet modules ⁽¹⁾ | _____ x 7400 | = | _____ bytes |
| Other communication modules ⁽²⁾ | _____ x 2000 | = | _____ bytes |
| Motion axis | _____ x 8000 | = | _____ bytes |
| FactoryTalk alarm instruction | _____ x 1000 | = | _____ bytes (per alarm) |
| FactoryTalk® subscriber | _____ x 10,000 | = | _____ bytes |

(1) The first DeviceNet module is 7400 bytes. Additional DeviceNet modules are 5800 bytes each.

(2) Count all the communication modules in the system, not just those in the local chassis. This includes device connection modules, adapter modules, and ports on PanelView™ terminals.

For redundant controller systems, double the memory estimate you calculate. For example, if you estimate you need 2 MB of memory, select a controller with 4 MB of memory.

Reserve 20...30% of the controller memory to accommodate growth.

Controller Compatibility

The following tables provide compatibility with I/O modules, display devices, and other controllers and communication devices.

Control Distributed I/O Modules

The controller can control these distributed I/O modules via the I/O Configuration tree in the programming software.

Distributed I/O Modules

| I/O Modules | EtherNet/IP | ControlNet | DeviceNet | Remote I/O |
|--|-------------|------------|-----------|--------------------|
| Chassis-based I/O | | | | |
| 1715 Redundant I/O | Yes | No | No | Yes |
| 1746 SLC™ I/O | No | No | No | Yes |
| 1756 ControlLogix I/O | Yes | Yes | No | No |
| 1769 Compact I/O™ | No | No | Yes | Yes ⁽²⁾ |
| 1771 Universal I/O | No | Yes | No | Yes |
| In-cabinet I/O | | | | |
| 1734 POINT I/O™ | Yes | Yes | Yes | No |
| 1734D POINTBlock I/O | No | No | Yes | No |
| 1790, 1790D, 1790P CompactBlock™ LDX I/O | No | No | Yes | No |
| 1791D, 1791P, 1791R CompactBlock™ I/O | No | No | Yes | No |
| 1794 FLEX™ I/O | Yes | Yes | Yes | Yes |
| 1797 FLEX Ex™ I/O | No | Yes | No | No |
| 5069 Compact I/O™ ⁽¹⁾ | Yes | No | No | No |
| On-Machine™ I/O | | | | |
| 1732 ArmorBlock® I/O | Yes | No | Yes | No |
| 1738 ArmorPOINT® I/O | Yes | Yes | Yes | No |
| 1792D ArmorBlock MaXum™ I/O | No | No | Yes | No |
| 1799 Embedded I/O | No | No | Yes | No |

(1) Compatible with ControlLogix 5580 Controllers only.

(2) With a third-party module.

Control Safety I/O Modules

The GuardLogix controller can control these safety I/O modules in a safety system.

| I/O Modules | EtherNet/IP | ControlNet | DeviceNet |
|---------------------------------|-------------|------------|-----------|
| In-cabinet I/O | | | |
| 1791DS CompactBlock™ Guard I/O™ | No | No | Yes |
| 1791ES CompactBlock Guard I/O | Yes | No | No |
| 1734 POINT Guard I/O™ | Yes | No | No |
| On-Machine™ I/O | | | |
| 1732DS ArmorBlock® Guard I/O™ | No | No | Yes |

Communicate with Display Devices

The controller can communicate with these display devices.

| Display Devices | EtherNet/IP | ControlNet | DeviceNet | DH+™ | Remote I/O | RS-232 (DF1) |
|--|-------------|------------|-----------|------|------------|--------------|
| Industrial Computers | | | | | | |

(1) Use a CIP generic MSG instruction to communicate with the 1203-FM1 SCANport™ module on a DIN rail that is remote to the controller. The remote DIN rail also requires a 1794-ACN15 or 1794-ACNR15 ControlNet adapter module.

(2) Use the generic module configuration to configure the 1203-CN1 module and a CIP generic MSG instruction to communicate with the module.

ControlLogix Redundancy

The ControlLogix 5560 and ControlLogix 5570 controllers support controller redundancy. In a redundant controller system, you need these components:

- Two 1756 chassis, each with the same of the following:
 - Number of slots
 - Compatible modules in the same slots
 - Redundancy firmware revisions in each module
 - Two additional ControlNet nodes outside the redundant chassis pair if the application uses ControlNet networks.
- One 1756-RM, 1756-RM2, 1756-RMXT, or 1756-RM2XT redundancy module per chassis that is connected by a 1756-RMCx cable (the 1756-RM2 redundancy modules cannot be paired with the 1756-RM redundancy modules).
- Up to two ControlLogix 5560 and ControlLogix 5570 controllers, or a combination of the two, in each chassis.
- Up to seven enhanced or standard (not mixed) communication modules, that is, 1756-CN2/B, 1756-CN2R/B, 1756-CN2RXT modules 1756-EN2T, 1756-EN2TR, or 1756-EN2TXT modules.

Technical Specifications - 1756 Redundancy Modules

| Attribute | 1756-RM | 1756-RM2 | 1756-RMXT | 1756-RM2XT | | |

Connections for ControlLogix and GuardLogix 5560 and 5570 Controllers

IMPORTANT When configuring your ControlLogix 5580 control system, you must account for the number of EtherNet/IP nodes you include in the I/O configuration tree in your project, rather than calculating the connections. If you exceed the node limit, the Logix Designer application displays a warning message.

A ControlLogix system uses connections to establish communication links between devices. The types of connections include the following:

- Controller-to-local I/O modules or local communication modules
- Controller-to-remote I/O or remote communication modules
- Controller-to-remote I/O (rack-optimized) modules
- Produced and consumed tags
- Messages
- Access via the controller programming software
- Access via RSLinx® software for HMI or other applications

You indirectly determine the number of connections the controller uses by configuring the controller to communicate with other devices in the system. The limit of connections may ultimately reside in the communication module you use for the connection. If a message path routes through a communication module, the connection related to the message also counts towards the connection limit of that communication module.

The 1756-L6 and 1756-L6S controllers support 250 connections. The 1756-L7 and 1756-L7S controllers support 500 connections. To calculate the total connections for a controller, consider the connections to local I/O modules and the connections to remote modules. Use this table to figure local connections.

Figure Local Connections

| Connection Type | Device Quantity | Connections per Device | Total Connections |
|--|-----------------|------------------------|-------------------|
| Local I/O module (always a direct connection) | 1 | | |
| 1756-M16SE, 1756-M08SE, 1756-M03SE SERCOS motion module 1756-M02AE, 1756-M02AS, 1756-HYD02 analog motion module | 3 | | |
| 1756-CN2, 1756-CN2R communication module 1756-CNB, 1756-CNBR communication module 1756-CN2RXT communication module | 0 | | |
| 1756-EN2F, 1756-EN2T communication module 1756-ENBT, 1756-EWEB communication module 1756-EN2TXT communication module | 0 | | |
| 1756-DNB communication module | 2 | | |
| 1756-DHRI0 communication module 1756-RIO communication module 1756-DHRI0XT communication module | 1 | | |
| 1756-DH485 communication module | 1 | | |
| Total | | | |

Regardless of how you configure local I/O modules (rack-optimized or direct connect), the controller establishes a direct connection for each local I/O module. Remote connections depend on the communication module. The number of connections the module supports determines how many connections the controller can access through that module. Use this table to figure remote connections for the controller.

Figure Remote Connections

| Connection Type | Device Quantity | Connections per Device | Total Connections |
|--|------------------------|-------------------------------|--------------------------|
| Remote ControlNet communication module Configured as a direct connection Configured as a rack-optimized connection | | 0 1 | |
| Remote I/O module over a ControlNet network (direct connection) | | 1 | |
| Remote Ethernet communication module Configured as a direct connection Configured as a rack-optimized connection | | 0 1 | |
| Remote I/O module over an EtherNet/IP network (direct connection) | | 1 | |
| Remote device over a DeviceNet network (accounted for in rack-optimized connection for local 1756-DNB module) | | 0 | |
| Other remote communication adapter | | 1 | |
| Safety input module | | 1 | |
| Safety output module | | 2 | |
| Produced tag Each consumer | | 1 1 | |
| Consumed tag | | 1 | |
| Connected message | | 1 | |
| Block-transfer message | | 1 | |
| Total | | | |

ControlLogix Controller Accessories

You can use the following accessories with ControlLogix controllers.

Memory Cards

Memory cards offer nonvolatile memory to permanently store a user program and tag data on a controller.

- The ControlLogix 5560 controllers support optional CompactFlash cards purchased separately.
- The ControlLogix 5570 controllers come with the 1784-SD1 Secure Digital (SD) card installed.
- The ControlLogix 5580 controllers come with the 1784-SD2 Secure Digital (SD) card installed.

The memory cards are installed in a socket on the controller. Through the programming software, you can manually trigger the controller to save to, or load from, nonvolatile memory or configure the controller to load from nonvolatile memory on powerup.

Technical Specifications - 1784 Memory Cards

| Attribute | 1784-CF128 | 1784-SD1 | 1784-SD2 |
|-----------------------|----------------------------------|---|----------|
| Memory | 128 MB | 1 GB | 2 GB |
| Supported controllers | 1756-L6, 1756-L6S ⁽¹⁾ | 1756-L7, 1756-L7S, 1756-L83E, 1756-L85E | |

1756 Energy Storage Modules

Instead of a battery, the 1756-L7 and 1756-L7S controllers are shipped with a 1756-ESMCAP energy storage module (ESM) already installed.

Technical Specifications - 1756 Energy Storage Modules

| Attribute | 1756-ESMCAP | 1756-ESMNSE | 1756-ESMNRM |
|---------------------------------|---|--|--|
| Description | Capacitor energy storage module (removable, ships installed with every controller). | Capacitor energy storage module (removable, no residual WallClockTime power backup). Use this ESM if your application requires that the installed ESM deplete its residual energy to 40 µJ or less before transporting it into or out of your application. Additionally, you can use this ESM with a 1756-L7 (8 MB) or smaller memory-sized controller only. Wait at least 20 minutes for the residual stored energy to decrease to 40 µJ or less before you remove the ESM. | Capacitor energy storage module (nonremovable, secures controller by preventing USB connection and SD card use). If the SD card is installed prior to insertion of the 1756-ESMNRM module, the SD card remains functional, but not removable. This ESM provides your application an enhanced degree of security. |
| Current draw @ 5.1V DC | 330 mA | 300 mA | 330 mA |
| North American temperature code | T4A | | |
| IEC temperature code | T4 | | |
| Enclosure type rating | None (open-style) | | |

Environmental Specifications - 1756 Energy Storage Modules

Environmental Specifications - 1756-L7SP Safety Partner Energy Storage Modules

| Attribute | 1756-SPESMNSE | 1756-SPESMNRM |
|--|--|---------------|
| Temperature, operating IEC 60068-2-1 (Test Ad, Operating Cold), IEC 60068-2-2 (Test Bd, Operating Dry Heat), IEC 60068-2-14 (Test Nb, Operating Thermal Shock) | 0...60 °C (32...140 °F) | |
| Temperature, nonoperating IEC 60068-2-1 (Test Ab, Unpackaged Nonoperating Cold), IEC 60068-2-2 (Test Bb, Unpackaged Nonoperating Dry Heat), IEC 60068-2-14 (Test Na, Unpackaged Nonoperating Thermal Shock) | -40...85 °C (-40...185 °F) | |
| Temperature, surrounding air, max | 60 °C (140 °F) | |
| Relative humidity IEC 60068-2-30 (Test Db, Unpackaged Damp Heat) | 5...95% noncondensing | |
| Vibration IEC 60068-2-6 (Test Fc, Operating) | 2 g @ 10...500 Hz | |
| Shock, operating IEC 60068-2-27 (Test Ea, Unpackaged Shock) | 30 g | |
| Shock, nonoperating IEC 60068-2-27 (Test Ea, Unpackaged Shock) | 50 g | |
| Emissions CISPR 11 | Group 1, Class A | |
| ESD immunity IEC 61000-4-2 | 6 kV contact discharges 8 kV air discharges | |
| Radiated RF immunity IEC 61000-4-3 | 10V/m with 1 kHz sine-wave 80% AM from 80...2000 MHz 10V/m with 200 Hz 50% Pulse 100% AM @ 900 MHz 10V/m with 200 Hz 50% Pulse 100% AM @ 1890 MHz 3V/m with 1 kHz sine-wave 80% AM from 2000...2700 MHz | |

Certifications - 1756-L7SP Safety Partner Energy Storage Modules

| Certification⁽¹⁾ | 1756-SPESMNSE, 1756-SPESMNRM |
|------------------------------------|--|
| c-UL-us | UL Listed Industrial Control Equipment, certified for US and Canada. See UL File E65584. UL Listed for Class I, Division 2 Group A,B,C,D Hazardous Locations, certified for US and Canada. See UL File E194810. |
| CE | European Union 2004/108/EC EMC Directive, compliant with: • EN 61326-1; Meas./Control/Lab., Industrial Requirements • EN 61000-6-2; Industrial Immunity • EN 61000-6-4; Industrial Emissions • EN 61131-2; Programmable Controllers (Clause 8, Zone A & B) |
| C-Tick | Australian Radio communications Act, compliant with: AS/NZS CISPR 11; Industrial Emissions |
| Ex | European Union 94/9/EC ATEX Directive, compliant with: • EN 60079-15; Potentially Explosive Atmospheres, Protection 'n' • EN 60079-0; General Requirements • II 3 G Ex nA IIC T4 X |
| KC | Korean Registration of Broadcasting and Communications Equipment, compliant with: Article 58-2 of Radio Waves Act, Clause 3 |

(1) When marked. See the Product Certification link at <http://www.ab.com> for Declarations of Conformity, Certificates, and other certification details.

GuardLogix Extreme-temperature Safety Partner Energy-storage Modules

The 1756-L7SPXT extreme-temperature safety partner is shipped with a 1756-SPESMNSEXT energy-storage module installed.

Technical Specifications - 1756-L7SPXT Extreme-temperature Safety Partner Energy-storage Modules

| Attribute | 1756-SPESMNSEXT | 1756-SPESMNRMXT |
|---------------------------------|--|---|
| Description | Capacitor energy-storage module for the extreme-temperature safety partner (removable, no residual WallClockTime power backup). Use this ESM if your application requires that the installed ESM deplete its residual energy to 40 µJ or less before transporting it into or out of your application. Additionally, you can use this ESM with a 1756-L73 (8 MB) or smaller memory-sized controller only. Wait at least 20 minutes for the residual stored energy to decrease to 40 µJ or less before you remove the ESM. | Capacitor energy-storage module for the safety extreme-temperature partner (nonremovable, secures controller by preventing USB connection and SD card use). If the SD card is installed prior to insertion of the 1756-ESMNRM module, the SD card remains functional, but not removable. This ESM provides your application an enhanced degree of security. |
| Current draw @ 5.1V DC | 300 mA | 330 mA |
| North American temperature code | T4A | |
| IEC temperature code | T4 | |
| Enclosure type rating | None (open-style) | |

1756 ControlLogix Batteries

Each ControlLogix 5560 controller ships with a battery. The ControlLogix 5560 controllers have nonvolatile memory if you install a 1784-CF128 industrial CompactFlash card. With nonvolatile memory, the controller can be used without a battery. If you do not use a battery, current tag data will remain in the state it was when the nonvolatile memory was saved.

These tables summarize battery life, replacement battery compatibility, and recommendations for use of an externally-mounted battery assembly.

Technical Specifications - 1756 ControlLogix Batteries

| Attribute | 1756-BA1 | 1756-BA2 | 1756-BATM ⁽²⁾ | 1756-BATA |
|------------------------------|--|--|--|---|
| Description | Lithium battery (0.59 g) | Lithium battery (0.59 g) | Externally-mounted battery assembly | Replacement lithium battery for 1756-BATM (5 g max lithium per each D cell; contains 2 D cells) |
| ControlLogix controllers | 1756-L61, 1756-L62, 1756-L63 controllers, series A | 1756-L61, 1756-L62, 1756-L63 controllers, series B 1756-L64, 1756-L65 controllers | 1756-L61, 1756-L62, 1756-L63 controllers, series A | 1756-BATM battery module |
| GuardLogix controllers | — | 1756-L61S, 1756-L62S, 1756-L63S | — | — |
| Supported legacy controllers | 1756-L55M controllers ⁽¹⁾ 1756-L60M03SE controller | — | 1756-L55M controllers ⁽²⁾ 1756-L60M03SE controller | 1756-BATM battery module |

(1) The 1756-L55M22, 1756-L55M23, and 1756-L55M24 controllers have nonvolatile memory and can be used without a battery.

(2) The 1756-BATM externally-mounted battery assembly is recommended for use with all 1756-L55x controllers, and is highly recommended for use with all series A 1756-L6x controllers, and provides longer battery life than the 1756-BA1 battery. The 1756-BATM assembly includes one 1756-BATA lithium battery assembly and a 1 m (3.28 ft) cable to connect housing to the controller.

Serial Communication Cables

The 1756-L6 and 1756-L6S controllers have a built-in serial port.

Technical Specifications - 1756 Serial Cables

| Attribute | 1756-CP3 | 1747-CP3 |
|-----------------|--|----------|
| Connector type | Female 9-pin D-shell | |
| Connector angle | Right angle connector to controller, straight to serial port | |
| Length | 3 m (9.84 ft) | |
