

excom I/O System

Input Module, Analog, 4-channel AI401EX

The input module AI401Ex is used for the connection of 2-wire transducers (active input = source mode / transducer passive) or 4-wire transducers (passive input = sink mode / transducer active).

The module features protection class Ex ib IIC and can be mounted in zone 1 in combination with the excom system. The field circuits feature ignition protection type Ex ia IIC resp. Ex iaD.

The field circuits are galvanically isolated from each other.

HART-compatible transducers can be connected to the module. The field device can thus be parametrized directly at the terminals on the DIN rail with a licensed modem. Additional impedance in the circuit is not necessary.

The measuring range is digitized in the scope of 0...21 mA. For clear reading, the digitized value is displayed in a range of 0 ... 21000 (independent of the parametrized measuring range) and transmitted to the host system.

- **Input module for the connection of passive transmitters (active inputs) or active transmitters (passive inputs).**
- **Complete galvanic isolation**
