

## **V** 4/2 - way spool valve S\_M\_\_\_PC06GSO973

Due to a product revision our spool valves with position monitoring, the proximity switch was exchanged. Note, additionally a voltage must be applied at the switch !

The attached data sheet shows that the installation dimensions were reduced clearly. Further technical improvements are:

- no wear of mechanical actuators and contact
- hydraulic influence from the tank does not exist
- uniform pin assignment, the switch has in series an opener and closing function.

Despite technical improvements the price could be held. Starting from July 2003 these valves can be supplied.
