

# Gateways for Device Integration

Connecting existing devices to new networks

- Integration of single field devices or sub-networks
- Gateway acting as device in the upper network and as controller in the sub-network
- Support of all major Serial, Fieldbus and Industrial Ethernet networks as controller and device
- Support of EATON SmartWire DT technology
- Secure network separation, as only process data are exchanged
- Comfortable commissioning via the Hilscher toolchain

**EtherCAT®**

**PROFINET**

**PROFIBUS**

EtherNet/IP™

DeviceNet™

**CANopen**

**Sercos**  
the automation bus

**CC-Link**

**Modbus**

ETHERNET  
**POWERLINK**

**SmartWire-DT™**  
The easy way to connect

**Serial**

## Available formats

# Gateways for Device Integration

## Integrate one or multiple field devices into any major control system

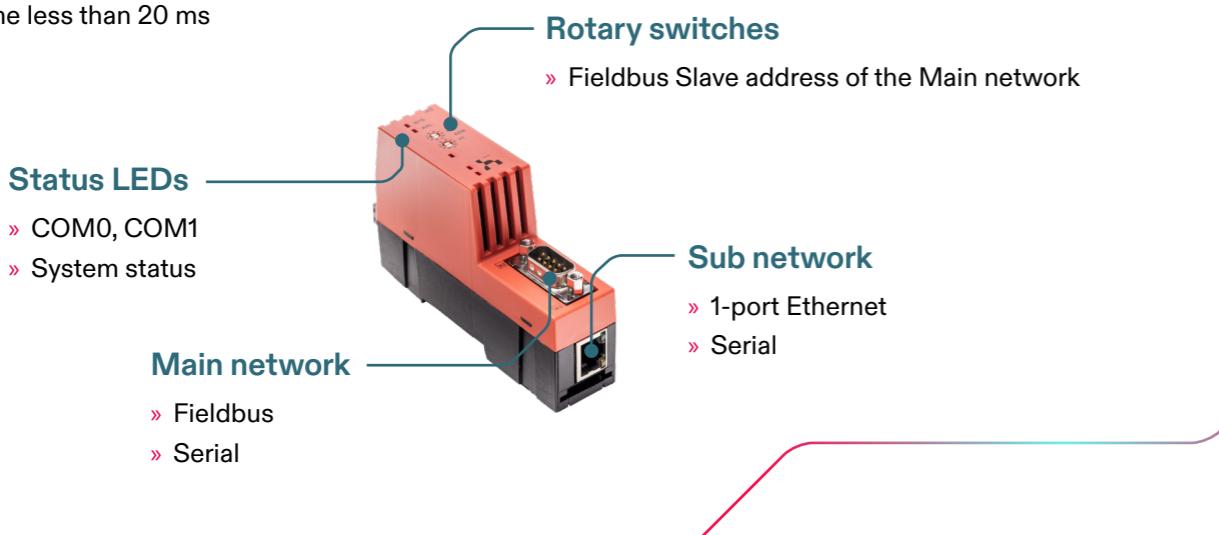

- Connecting existing devices to new networks in case of a technology change, e.g. from Serial to Fieldbus or Fieldbus to Industrial Ethernet
- Maximum convertible number of I/O data is determined by the protocol with the lower amount of I/O data
- Support of cyclic data only and protocol status information

## NT 50

### Entry class gateway

- » Slim and compact design
- » Focus on essential functionality
- » Conversion time less than 20 ms

## NT 151

### High-end gateway

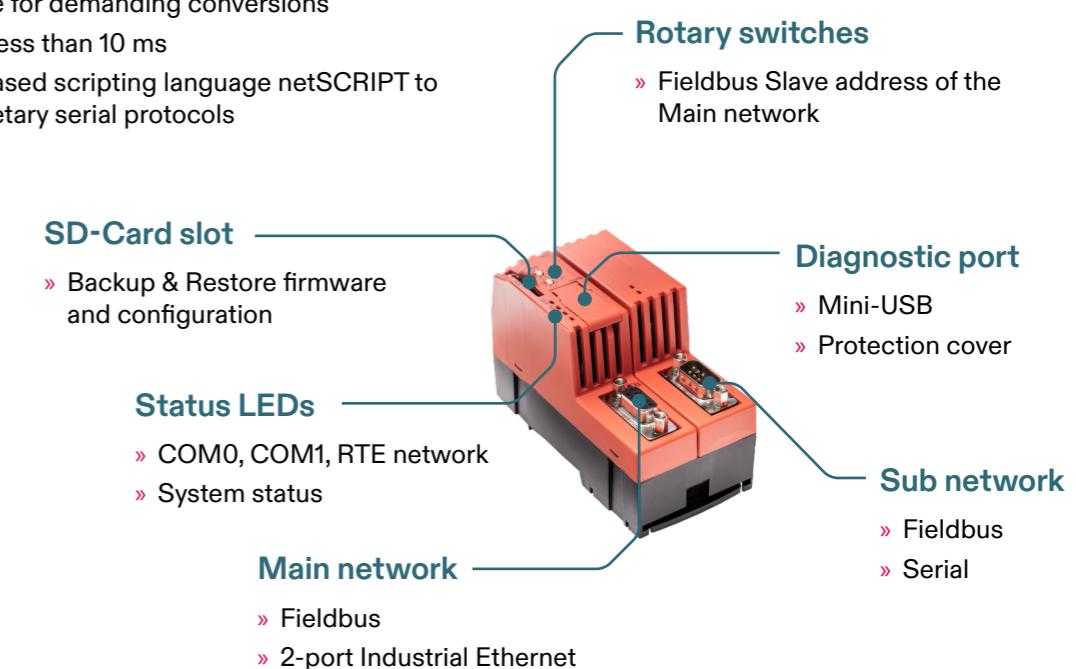

- » Bridging between two Industrial Ethernet networks
- » Secure network segregation via internal data buffer
- » Fast conversion time less than 10 ms

## NT 100

### Flexible gateway

- » High performance for demanding conversions
- » Conversion time less than 10 ms
- » Support of Lua-based scripting language netSCRIPT to programm proprietary serial protocols

# Gateways for Device Integration

Integrate one or multiple field devices into any major control system

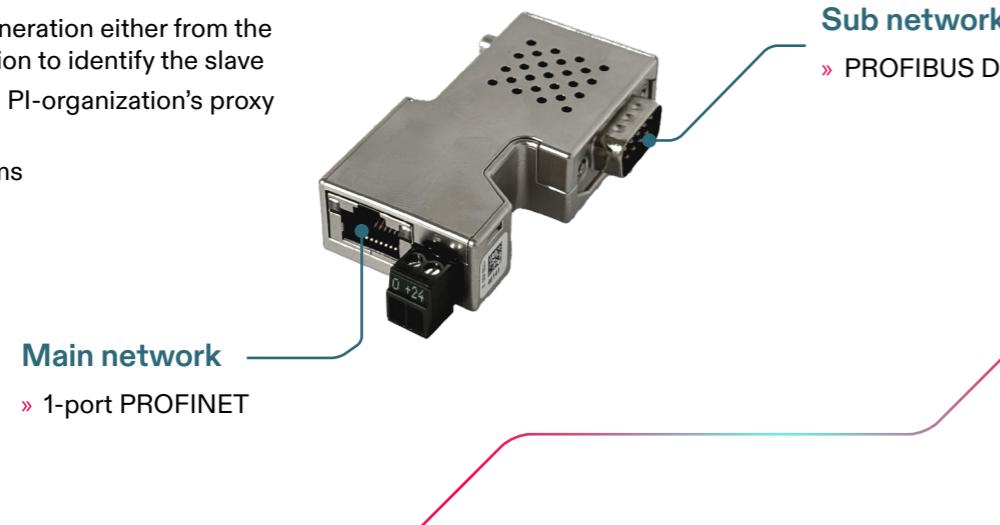

## Productinformation

### Technical Data

## NL 51N-DPL

### PROFIBUS to PROFINET PROXY

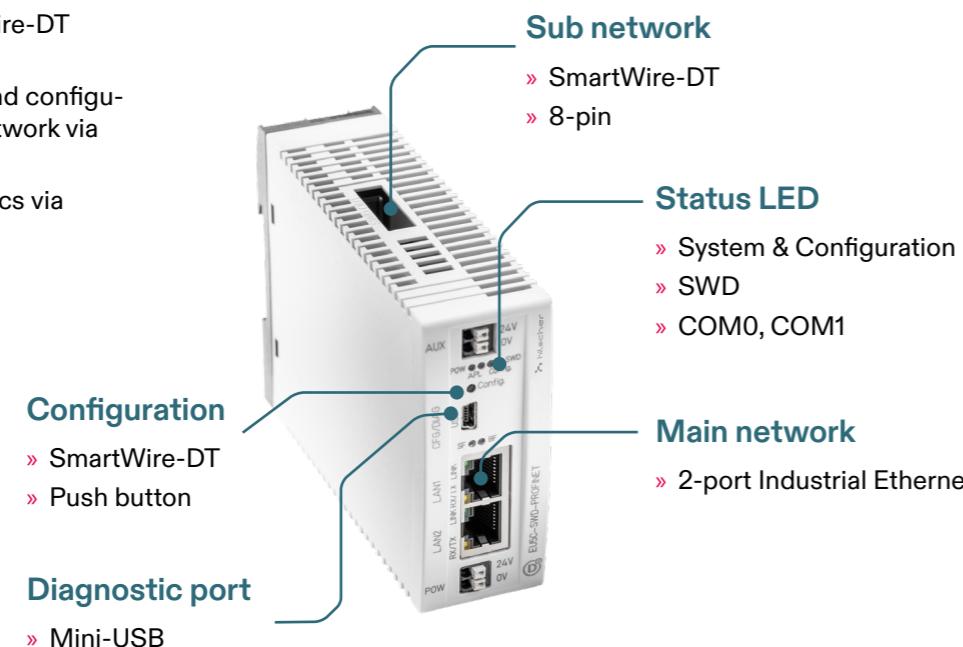

- » Integrates a single DP-Slave into PROFINET
- » For direct mounting on the DP interface
- » Automatic GSDML file generation either from the GSD file or via Scan function to identify the slave
- » Works in accordance with PI-organization's proxy guideline
- » Conversation time typ. 5 ms

## EU5C-SWD

### SmartWire-DT connectivity to Industrial Ethernet

- » Transparent I/O data mapping of a SmartWire-DT trunk into Industrial Ethernet
- » Featuring full range of 99 SmartWire-DT stations per trunk
- » Automatic topology recognition and configuration setting of SmartWire-DT network via configuration button
- » Advanced functions and diagnostics via SWD-Assist from Eaton (optional)
