COMMUTATORI A CAMME | CAM SWITCHES

**Serie CS 16-315A**

Interruttori / Switches	10
Commutatori di linea / Changeover switches	13
Commutatori per motori / Motor switches	15
Commutatori multivie / Multi-step switches	16
Commutatori voltmetrici / amperometrici / Voltmeter / ammeter switches	17
Dimensioni e dime di foratura / Dimensions and fixing holes	18
Caratteristiche tecniche / Technical characteristics	20

**Serie CP 12-16A**

Interruttori con morsetti IP20 / Switches with IP20 terminals	24
Commutatori di linea con morsetti IP20 / Changeover switches with IP20 terminals	25
Commutatori per motori con morsetti IP20 / Motor switches with IP20 terminals	28
Commutatori voltmetrici / amperometrici con morsetti IP20 / Voltmeter / ammeter switches with IP20 terminals	29
Dimensioni / Dimensions	30
Caratteristiche tecniche / Technical characteristics	31

Accessori serie CS/CP / Accessories for CS/CP series	32
Schemi elettrici serie CS/CP / Electrical diagrams for CS/CP series	36
Modulo richiesta schemi speciali / Special versions request form	39

AUSILIARI DI COMANDO | CONTROL SWITCHES

**Serie PM ø 22mm**

Lampade di segnalazione LED monoblocco / Monoblock LED indicators	42
Pulsanti monoblocco non luminosi / Monoblock operators unlighted	43
Selettore monoblocco non luminosi / Monoblock selector switches unlighted	44
Ronzatori, potenziometri e puls. multifunzione / Buzzers, potentiometers and multifunction pushbuttons	45
Pulsanti di emergenza monoblocco e modulari / Monoblock and modular emergency stop	46
Pulsanti di emergenza in cassetta / Emergency stop in enclosure	47
Pulsantiere di emergenza 3 fori / Emergency pushbutton stations 3 holes	48
Pulsantiere di manutenzione ascensori 4 e 5 fori / Inspection pushbutton stations 4 and 5 holes	49
Pulsantiere vuote da 1 a 5 fori / Pushbutton stations from 1 to 5 holes	50
Caratteristiche tecniche / Technical characteristics	51

**Serie PR ø 22mm**

Pulsanti luminosi/non luminosi corpo in metallo elemento frontale tondo <i>Illuminated-non illuminated pushbuttons with metal body and rounded front element</i>	56
Selettori luminosi/non luminosi corpo in metallo 2, 3 posizioni elemento frontale tondo <i>Illuminated-non illuminated selectors 2/3 positions with metal body and rounded front element</i>	58
Manipolatori 3, 5 posizioni, corpo in metallo, elemento frontale tondo <i>Joystick operators, 3/5 positions, with metal body and rounded front element</i>	59
Pulsanti luminosi/non luminosi corpo in termoplastico <i>Illuminated-non illuminated pushbuttons with thermoplastic body</i>	60
Pulsanti non luminosi, indicatori luminosi e comando potenziometro in termoplastico <i>Non-illuminated pushbuttons, illuminated indicators and potentiometer control with thermoplastic body</i>	61
Selettori non luminosi 2, 3 posizioni corpo in termoplastico <i>Illuminated-non illuminated selectors 2/3 positions with thermoplastic body</i>	62
Pulsanti di emergenza / Emergency pushbuttons	63
Custodie isolanti a doppio isolamento con fori ø 22 o ø 30 / Double insulation enclosures with ø 22 or ø 30 holes	64
Custodie isolanti a doppio isolamento con pulsanti ø 22 / Double insulation enclosures with ø 22 holes	65

**Serie PF**

Pulsanti in termoplastico e in metallo 10A 380V / Pushbuttons with thermoplastic or metal body 10A 380V	66
---	----

**Serie P ø 22mm e ø 30mm**

Elementi di contatto e alimentazioni / Contacts blocks and power supplies	67
Accessori / Accessories	68
Targhette / Legend plates	69
Caratteristiche tecniche / Technical characteristics	71

# COMMUTATORI A CAMME

## CAM SWITCHES

- Impiego per interruzione, commutazione, inserzione ed avviamento di circuiti con carichi elettrici induttivi o resistivi, con portate da 5A a 315A
- Elevata resistenza meccanica ed alle correnti superficiali, stabilità dimensionale
- Elementi componibili
- Contatti ad apertura forzata/positiva in lega d'argento a doppia interruzione
- Morsetti di collegamento a vite per conduttori con o senza capicorda, chiaramente identificabili
- Ampia gamma di dispositivi e accessori per la realizzazione di numerose versioni
- Qualità ed affidabilità per la massima sicurezza di funzionamento dei circuiti di comando e di controllo
- Economicità e semplicità di utilizzo
- Conformità alle normative nazionali ed internazionali
- Grado di protezione IP secondo IEC/EN 60529
- Protezione frontale massima IP66
- Condizioni d'impiego in ambienti caldo umidi
- Altitudine d'impiego 2.000m
- Funzionamento in tutte le posizioni di montaggio
- Protezione IP20 ai morsetti per i prodotti indicati
- Materiali plastici esenti da amianto e cadmio
- Varie opzioni di colore degli attuatori
- Lunga vita dei contatti grazie all'azione di autopulitura del contatto mobile durante la manovra
- Temperatura di funzionamento -25...+60 °C

- *Use for breaking, changing-over, making and starting of circuits with inductive or resistive electric loads; rated loads from 5A up to 315A*
- *High resistance to mechanical stress and to surface currents, dimensional stability*
- *Modular elements*
- *Double break silver alloy contacts*
- *Screw terminals for cables with/without cable terminal, of easy identification*
- *Wide range of products and accessories to obtain many different versions*
- *Quality and reliability for the highest safety of operation on control circuits*
- *Convenience and practical use*
- *Compliance with national and international standards*
- *IP protection degree according to IEC/EN 60529*
- *Maximum frontal protection IP66*
- *Conditions of use in hot humid environments*
- *Maximum use altitude: 2000 m*
- *They can be used in every mounting positions*
- *IP20 terminals protection for the products indicated*
- *Plastic materials free of amianto and cadmium*
- *Various colour options for the actuators*
- *Long contacts life thanks to the self-cleaning action of the moving contact during the operation*
- *Operating temperature -25...+60 °C*

## Categorie d'impiego | Utilization categories

Per la scelta del tipo di commutatore oppure dell'elemento di contatto più idoneo, in base alla specifica applicazione, è necessario raffrontare i valori di esercizio (tensione e corrente o potenza) dell'unità da comandare con le prestazioni del commutatore o dell'elemento di contatto. Per effettuare tale raffronto fare riferimento alle categorie di utilizzo secondo le norme IEC/EN60947-1-3, 60947-5-1, 60204-1 indicate nelle pagine tecniche.

*To choose the most suitable and economic cam-switch in relation to the specific application it is necessary to compare the operating parameters of the unit to be controlled (voltage, current and power) with the cam switch performance. To make this comparison consult the IEC/EN 60947-1-3, 60947-5-1, 60204-1, specifications for the utilization categories as indicated in the technical pages.*

### Motori asincroni a gabbia | Cage induction motors

110,00	333,00	193,00	153,00	110,00

Valori di assorbimento per motori trifase in c.a. (4 poli 1500 giri/minuto)  
Absorption values for three-phase motors in a.c. (4 poles 1500 rpm)

Le categorie d'impiego più comuni sono le seguenti:  
*The most common utilization categories are the following:*

- AC-1 Carichi non induttivi o debolmente induttivi, forni a resistenza / *Non-inductive or slightly inductive loads, resistance furnaces*
- AC-3 Motori a gabbia: avviamento, arresto di motore durante la rotazione / *Squirrel-cage motors: starting switching off motors during running*
- AC-4 Motori a gabbia: avviamento, frenatura di contro corrente, manovra a impulsi / *Squirrel-cage motors: starting, reversing, electric breaking, inching*
- AC-12 Carichi resistivi e carichi a stato solido opto-isolati / *Control of resistive loads and solid state loads with isolation by optocouplers*
- AC-13 Carichi a stato solido con trasformatore di isolamento / *Control of solid state loads with transformer isolation*
- AC-15 Comando di carichi elettromagnetici in corrente alternata (>72VA) / *Control of alternate current electromagnetic loads (>72VA)*
- AC-20 Chiusura ed interruzione a vuoto / *Connecting and disconnecting under no-load condition*
- AC-21 Manovra di carichi resistivi con sovraccarichi di modesta entità / *Switching of resistive loads, including moderate overloads*
- AC-22 Manovra di carichi misti, resistivi ed induttivi con sovraccarichi di modesta entità / *Switching of mixed resistive and inductive loads, including moderate overloads*
- AC-23 Manovra di motori o altri carichi altamente induttivi / *Switching of motor loads or other highly inductive loads*
- DC-1 Carichi non induttivi o debolmente induttivi, forni a resistenza / *Non-inductive or slightly inductive loads, resistance furnaces*
- DC-3 Motori in derivazione, avviamento, frenatura in contro corrente, manovra a impulsi, frenatura dinamica di motori / *Shunt-motors, starting, plugging, inching, dynamic breaking of motors*
- DC-5 Motori in serie, avviamento, frenatura in contro corrente, manovra a impulsi, frenatura / *Series-motors, starting, plugging, inching, dynamic breaking of motors*
- DC-12 Carichi resistivi e carichi a stato solido opto-isolati / *Control of resistive loads and solid state loads with isolation by optocouplers*
- DC-13 Comando di elettromagneti in corrente continua / *Control of direct current electromagnets*
- DC-20 Chiusura ed interruzione a vuoto / *Connecting and disconnecting under no-load conditions*
- DC-21 Manovra di carichi resistivi con sovraccarichi di modesta entità / *Switching of resistive loads, including moderate overloads*
- DC-22 Manovra di carichi misti, resistivi ed induttivi con sovraccarichi di modesta entità (es. motori in derivazione) / *Switching of mixed resistive and inductive loads, including moderate overloads (e.g. shunt motors)*
- DC-23 Manovra di motori o altri carichi altamente induttivi (es. motori in serie) / *Switching of highly inductive loads (e.g. series motors)*

## Applicazioni tipiche dei commutatori

### Interruttori

Sono interruttori usati per collegare-interrompere qualsiasi tipo di circuito elettrico. Vengono utilizzati in un'ampia gamma di applicazioni come ad esempio il comando di motori oppure il sezionamento di circuiti elettrici.

### Commutatori di linea

Sono commutatori a 3 posizioni utilizzati per alimentare un carico alternando due alimentazioni indipendenti. L'utilizzo tipico di questi apparecchi riguarda il controllo di carichi che possono usufruire di un'alimentazione principale ed una ausiliaria.

### Commutatori a più vie

Sono commutatori a 2 o più posizioni che permettono di collegare carichi indipendenti ad un'unica sorgente di alimentazione.

### Invertitori di Marcia

Sono commutatori che permettono di comandare manualmente e direttamente il senso di rotazione del motore, tramite l'inversione delle fasi di alimentazione.

### Commutatori di poli Dahlander

Sono commutatori che permettono di variare manualmente la velocità di rotazione del motore, variando la configurazione delle fasi di alimentazione ed agendo sul numero di poli.

### Commutatori Stella-Triangolo

Sono commutatori che consentono manualmente di ridurre la tensione applicata al motore nella fase di avviamento, agendo sul collegamento delle fasi di alimentazione.

## Changeover switches typical applications

### Switches

*Switches used to connect-interrupt any type of electric circuit. They are used in a wide range of applications such as motor control or the disconnection of electrical circuits.*

### Changeover switches

*3-position switches that are used to power a load alternating two independent power supplies. The typical use of these devices involves the monitoring of loads that can benefit of a main supply and an auxiliary supply.*

### Multi-step switches

*Multi-position switches used to connect a variety of loads to an electrical supply.*

### Reversing switches

*Three-position switches used to manually control the direction of rotation of a motor, by means of the reversion of the supply phases.*

### Dahlander switches

*They are switches which allow to manually vary the speed of rotation of the motor, by varying the configuration of the supply phases of the motor and acting on the number of poles.*

### Star-Delta Switches

*Three-position switches used to manually reduce the voltage starting value of a motor, acting on the connection of the supply phases.*

## Equipaggiamento elettrico delle macchine IEC/EC 60204

### DISPOSITIVO DI SEZIONAMENTO DELL'ALIMENTAZIONE

Per ogni alimentazione si deve prevedere un dispositivo di sezionamento a comando manuale che permetta, quando richiesto, la separazione dell'equipaggiamento elettrico della macchina all'alimentazione.

Il dispositivo di sezionamento deve essere uno dei seguenti tipi:

- un interruttore-sezionatore conforme alla norma EN 60947-3: nella categoria AC-23 o DC-23;
- un sezionatore con un contatto ausiliario che, mediante dispositivi di interruzione, provochi in tutti i casi l'interruzione del circuito di carico prima dell'apertura dei contatti principali del sezionatore.

### Il dispositivo di sezionamento dell'alimentazione deve soddisfare tutte le seguenti prescrizioni:

- isolare l'equipaggiamento elettrico dall'alimentazione ed avere una sola posizione di aperto e di chiuso, chiaramente marcata con "0" e "1";
- avere un'apertura visibile, oppure un indicatore di posizione che possa segnalare la posizione di aperto soltanto se tutti i contatti sono effettivamente aperti e dove esista un'adequata distanza

## Safety of machinery - Electrical equipment of machines IEC/EN 60204

### SWITCH DISCONNECTOR DEVICE

*For each power supply must be provided a disconnection device with manual control that, when required, allows the separation of the electrical equipment of the machine from the supply.*

*The disconnecting device must be one of the following types:*

- a switch-disconnector in accordance with EN 60947-3: utilization category AC-23 or DC-23;
- a switch disconnector with an auxiliary contact that, by means of some interrupting devices, cause in all cases the interruption of the load circuit before the opening of the main contacts of the disconnector.

### The disconnection device must meet all the following requirements:

- isolate the electrical equipment from the supply having a single open or closed position, clearly marked with "0" and "1";
- have a visible opening, or a position indicator that can signal the open position only if all the contacts are actually open and if there is an adequate isolation distance between all contacts in accordance with EN 60947-3;

- di isolamento tra tutti i contatti, conformemente alla norma EN 60947-3;
- interrompere tutti i conduttori attivi del suo circuito di alimentazione; tuttavia, nei sistemi di alimentazione TN, il conduttore di neutro può essere scollegato oppure collegato;
- avere un potere di interruzione sufficiente per interrompere la corrente a rotore bloccato del motore di maggior potenza ed in più la somma delle correnti di funzionamento nominale di tutti gli altri motori e/o carichi;
- avere una maniglia di azionamento esterna. Quando il sezionatore non viene utilizzato anche come dispositivo di arresto di emergenza, la maniglia di emergenza non deve essere colore rosso; si raccomandano i colori nero e grigio;
- essere munito di un dispositivo che permetta di bloccarlo nella posizione di aperto (es. mediante lucchetto).

### Dispositivi di sezionamento dell'alimentazione come dispositivi di arresto di emergenza

I dispositivi di arresto di emergenza devono essere posizionati in ogni stazione di comando ed in altri punti operativi in cui può essere richiesto un arresto di emergenza. Non deve essere possibile ripristinare il circuito fino a che l'attuatore del dispositivo di arresto di emergenza non sia stato riarmato manualmente. Quando sono previsti diversi dispositivi di arresto di emergenza, il circuito non deve essere ripristinato fino a che tutti gli attuatori azionati in precedenza non sono stati riarmati. I contatti dei dispositivi di arresto di emergenza azionati a mano devono assicurare una manovra di apertura positiva. Gli attuatori dei dispositivi di arresto di emergenza devono essere di colore rosso. Se esiste uno sfondo dietro l'attuatore del dispositivo, esso deve essere di colore giallo.

### Dispositivi di interruzione per la prevenzione di avviamenti imprevisti

Si devono prevedere dispositivi di interruzione a prevenzione di avviamenti imprevisti nei casi in cui si possano verificare delle situazioni pericolose nel caso di un avviamento imprevisto (ad esempio se durante una manutenzione avvenisse un avviamento). Un dispositivo di sezionamento dell'alimentazione può soddisfare questa funzione. Tali dispositivi devono essere adatti ed appropriati all'uso cui sono destinati, devono essere correttamente posizionati e chiaramente identificati.

### Dispositivi di sezionamento dell'alimentazione usati come dispositivi di arresto di emergenza

In alcune macchine semplici il dispositivo di sezionamento dell'alimentazione può avere la funzione di un dispositivo di arresto di emergenza. In tali casi dovrà soddisfare anche le prescrizioni per dispositivi di arresto di emergenza.

#### DEFINIZIONI

**Sezionatori:** dispositivi meccanici capaci di isolare il carico dell'alimentazione. Nella posizione di aperto devono garantire una sufficiente distanza di isolamento.

**Interruttori:** dispositivi meccanici con potere di apertura e chiusura della corrente di esercizio.

**Interruttori-Sezionatori:** Interruttori che rispondono alle richieste di isolamento dei sezionatori.

- stop all active conductors of its power circuit; but in TN power systems, the neutral conductor can be connected or disconnected;
- have a breaking capacity sufficient to stop the locked rotor current of the most powerful motor and of the sum of the nominal operating currents of all other motors and / or loads;
- have an external operating handle. When the switch is not used as a device for emergency stop, the emergency handle must not be red, we recommend the black and gray colours;
- having a device that allows to lock it in open position (eg by means of a padlock).

### Disconnecting device for devices such as emergency stop

Emergency stop devices must be placed in each control station and in other operating points in which may be required an emergency stop. It must not be possible to restore the circuit until the actuator of the emergency stop device has been manually reset. When there are different emergency stop devices, the circuit should not be restored until all the actuators previously operated have not been rearmed. The contacts of the emergency stop devices operated by hand must ensure positive opening operation. The actuators of emergency stop devices shall be of red colour. If there is a background behind the actuator of the device, it must be yellow.

### Switching devices for the prevention of unexpected start-ups

Switching devices must be provided in order to prevent unexpected start-ups in cases where dangerous situations can occur in the case of unexpected start-up (for example if, during a maintenance operation, a start-up will occur). A supply disconnecting device can fulfill this function. These devices must be suitable and appropriate to their intended use, they must be properly positioned and clearly identified.

### Supply disconnecting device used as emergency stop devices

In some simple machines the supply disconnecting device may have the function of an emergency stop device. In such cases it must also meet the requirements for emergency stop devices.

#### DEFINITIONS

**Disconnectors:** mechanical devices capable of isolating the power load. In open position they must guarantee a sufficient insulation distance.

**Switches:** mechanical devices with the power to open and close the flowing current.

**Switch-Disconnectors:** Switches that respond to the specifications regarding the insulation of disconnectors.

## Normative

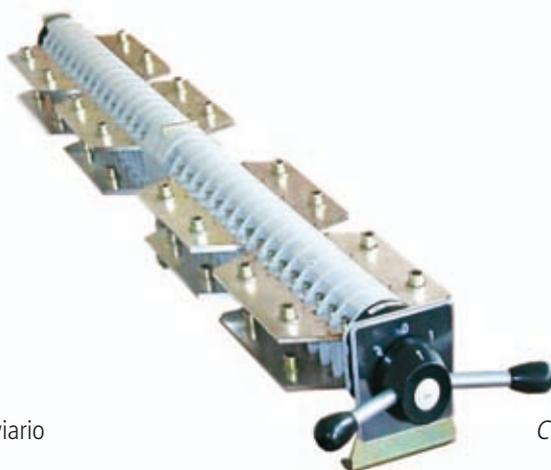

Costruiti in conformità agli standard IEC/EN 60947-1, 60947-3, 60947-5-1, CSA 22.1-14, UL 508, 486E. Corrispondono alle esigenze tecniche e di sicurezza in conformità ai requisiti delle direttive 2006/95/CE riguardo alla libera circolazione di apparecchiature elettriche nell'ambito della Comunità Europea. Inoltre rispondono alle prescrizioni della direttiva 2004/108/CE relativa alla compatibilità elettromagnetica (EMC). Per la sicurezza dell'utente gli apparecchi devono essere scelti, installati ed impiegati osservando scrupolosamente i limiti d'impiego indicati nel presente catalogo; nonchè alle normative nazionali ed internazionali riguardanti la sicurezza delle apparecchiature o degli impianti sui quali devono essere utilizzati.

## Standards

Manufactured in accordance with IEC / EN 60947-1, 60947-3, 60947-5-1, CSA 22.1-14, UL 508, 486E. They correspond to the technical and safety requirements in accordance with Directive 2006/95/EC that refers to the free circulation of electrical equipments within the European Community. Also meet the requirements of Directive 2004/108/CE relating to electromagnetic compatibility (EMC). For user safety, the equipments must be selected, installed and used following the characteristics and limitations indicated in this catalog, as well as the national and international regulations concerning the safety of the equipments or facilities in which they must be used.

Prodotti speciali per il settore ferroviario

Custom products for railway application

## Gradi di protezione degli involucri IEC/EN 60529 | IP enclosure protection degree according to IEC/EN 60529

### 1<sup>a</sup> cifra | 1<sup>st</sup> digit

#### Protezione contro corpi solidi Protection against ingress of solid bodies

- 0** Nessuna protezione / No protection
- 1** Non deve penetrare una sfera di Ø 50mm / Protected against the penetration of a sphere with a diameter of 50 mm
- 2** Non deve penetrare una sfera di Ø 12,5mm / Protected against the penetration of a sphere with a diameter of 12,5 mm
- 3** Non deve penetrare una sfera di Ø 2,5mm / Protected against the penetration of a sphere with a diameter of 2,5 mm
- 4** Non deve penetrare una sfera di Ø 1mm / Protected against the penetration of a sphere with a diameter of 1 mm
- 5** Protetto contro la polvere / Protected against dust  
La penetrazione di polvere non è totalmente esclusa, ma non deve penetrare in quantità tale da nuocere al buon funzionamento dell'apparecchiatura o da pregiudicarne la sicurezza. / The penetration of dust is not totally prevented, but it must not enter in sufficient quantity to interfere with the normal operation of the equipment or compromising its safety
- 6** Protetto contro la polvere / Protected against dust  
Non è ammessa la penetrazione di polvere / It is not allowed any ingress of dust

### 2<sup>a</sup> cifra | 2<sup>nd</sup> digit

#### Protezione contro i liquidi Protection against ingress of water

- 0** Nessuna protezione / No protection
- 1** Protetto contro la caduta verticale di gocce d'acqua / Protected against vertical dropping water
- 2** Protetto contro la caduta verticale di gocce d'acqua con inclinazione max dell'involucro di 15° / Protected against vertical dropping water with inclination up to 15°
- 3** Protetto contro la pioggia (angolo di caduta inferiore o uguale a 60°) / Protected against rain (fall angle lower then or equal to 60°)
- 4** Protetto contro spruzzi d'acqua / Protected against spraying water
- 5** Protetto contro getti d'acqua / Protected against water jets
- 6** Protetto contro getti d'acqua potenti (ondate) / Protected against powerful water jets
- 7** Protetto contro l'immersione temporanea (stagno all'immersione) / Protected against the effects of temporary immersion (immersion water-proof)
- 8** Protetto contro l'immersione continua (stagno all'immersione) / Protected against the effects of continuous immersion (immersion water-proof)

## Caratteristiche tecniche

### Technical specifications

#### Serie CP 12/16A | CP Series 12/16A

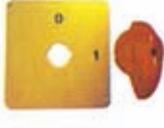

Serie-Taglia / Size-Series	CP12	CP16
$I_{th}$	12	16
<b>AC21</b>	Manovra di carichi resistivi con sovraccarichi di modesta entità / <i>Switching of resistive loads with light overloads</i>	
$U_e$ (V)	690	690
$I_e$ (A)	12	16
<b>AC2</b>	Motori ad anelli: avviamento disinserzione / <i>Slip-ring motors: switching on and switching off</i>	
220...240V - 3ph (kW)	2,5	5,5
380...440V - 3ph (kW)	4,3	9,5
500V - 3ph (kW)	4,3	9,5
<b>AC23</b>	Manovra di motori o altri carichi altamente induttivi / <i>Switching of motor loads or other highly inductive loads</i>	
220...240V - 1ph (kW)	1,3	3,2
220...240V - 3ph (kW)	3,9	5,5
380...440V - 3ph (kW)	5,5	10,5
500V - 3ph (kW)	5,5	10,5
<b>AC3</b>	Motori a gabbia: avviamento, arresto di motore durante la rotazione / <i>Squirrel-cage motors: starting, switches off motors during running time</i>	
220...240V - 1ph (kW)	1,6	3,0
220...240V - 3ph (kW)	3,0	5,5
380...440V - 3ph (kW)	4,2	7,9
500V - 3ph (kW)	4,2	10,5
<b>AC4</b>	Motori a gabbia: avviamento, frenatura di contro corrente, manovra a impulsi / <i>Squirrel-cage motors: starting, plugging, inching</i>	
220...240V - 1ph (kW)	0,35	0,8
220...240V - 3ph (kW)	2,1	2,2
380...440V - 3ph (kW)	2,2	3,9
500V - 3ph (kW)	2,2	4,1
<b>AC15</b>	Comando di carichi elettromagnetici in corrente alternata / <i>Switching of alternate current electromagnetic loads</i>	
230V (A)	–	6,2
400V (A)	–	4,3
500V (A)	–	3,3

Serie-Taglia / Size-Series	CP12	CP16
Corrente nominale di breve durata ammissibile (Isg.) / <i>Admittable short-time rated current</i>	A 500	500
Sezioni minime/massime collegabili (mm <sup>2</sup> ) / <i>Minimum / Maximum connecting cables sections</i>	6	6
Viti morsetti / <i>Terminals screws</i>	M3	M3
Durata meccanica / <i>Mechanical life</i>	10 <sup>6</sup>	10 <sup>6</sup>
Durata elettrica / <i>Electrical life</i>	5.10 <sup>5</sup>	5.10 <sup>5</sup>
Carico ammissibile in servizio intermittente / <i>Load capacity with discontinuous load</i>	Duty cycle: 60/40/25 % = 1,3/1,6/2,0 x I <sub>th</sub>	
Temperatura ambiente di utilizzo / <i>Operating ambient temperature</i>	°C A giorno / <i>free air</i> +60...-25 in cassetta / <i>in enclosure</i> +40...-25	
Norme di riferimento / <i>Reference standards</i>	IEC/EN 60947-3	IEC/EN 60947-3
Approvazioni in corso / <i>Pending homologations</i>	UL, CSA, IMQ

*IP65 frontal protection degree*
- Operatori con elemento frontale cromato nero,  $\varnothing$  30 mm e frontale quadrato sono disponibili a richiesta  
*Actuators with black chromed frontal element  $\varnothing$  30 mm and square front are available on request*

## Caratteristiche generali

La gamma di ausiliari di comando e segnalazione ITALWEBER offre molteplici soluzioni d'impiego per il comando e controllo di circuiti elettrici a bassa tensione alimentati in corrente alternata o continua. Gli attuatori sono disponibili con fissaggio diametro 22 e 30 mm, i corpi sono sia metallici che termoplastici e disponibili in versione tonda o quadra. Tutti gli operatori hanno grado di protezione IP65 e sono quindi protetti contro la penetrazione di corpi solidi, polvere e liquidi. La gamma comprende pulsanti stabili ed instabili, luminosi e non, selettori a chiave e a manopola, selettori e segnali luminosi, manipolatori a cloche, pulsanti a fungo e di emergenza, custodie isolanti, comandi potenziometrici, pulsantiere a palmo: una gamma completa in grado di soddisfare ogni esigenza.

### I vantaggi

Il fissaggio dei corpi in termoplastico avviene tramite controgliera per velocizzare al massimo l'operazione, mentre gli attuatori metallici si fissano per mezzo di due viti per garantire la massima tenuta meccanica, per impiego pesante ed in presenza di forti vibrazioni. La nuova linea di pulsantiere termoplastiche include custodie a 1, 2, 3 e 5 posti caratterizzate da grado di protezione IP65 e dalla semplificata installazione che ne permette il cablaggio ad elementi di contatto già montati sul fondo cassetta. Gli elementi di contatto e le alimentazioni sono accoppiabili a scatto e possono essere cablati separatamente dall'operatore, permettendo un'elevata flessibilità e semplificando le operazioni di installazione e manutenzione; inoltre offrono il grado di protezione IP20 contro i contatti accidentali. Sono disponibili sia in versione per montaggio diretto su attuatore che per fondo cassetta, con terminali a vite o innesto. Le caratteristiche costruttive e l'elevato grado di modularità consentono una rapido montaggio ed una notevole flessibilità, con un forte risparmio di tempo durante l'installazione e una riduzione dei costi di magazzino.

### Le certificazioni

L'impiego dei migliori materiali e l'esperienza ITALWEBER nel campo garantiscono l'elevata qualità, l'affidabilità nel tempo e la sicurezza di funzionamento degli ausiliari di comando serie P, il tutto comprovato dai Marchi e Omologazioni concessi dai più importanti Istituti Internazionali.

### La sicurezza

Nei pulsanti d'emergenza l'operatore è stato realizzato per rispondere alle normative IEC/EN 60947-5-5 con particolare riferimento ai requisiti di sicurezza della Direttiva Macchine Europea EN 60418. Infatti, la particolare costruzione del corpo operatore, grazie all'ausilio di un sistema meccanico a molla, garantisce l'apertura positiva del contatto NC ogni qualvolta il sistema di aggancio viene azionato volontariamente prevenendo in questo modo qualsiasi possibile danno a persone o cose.

### Accessori e altri prodotti

La nostra gamma di ausiliari di comando è completata da un'ampia scelta di prodotti per soddisfare ogni esigenza.

## General characteristics

Italweber range of modular control switches and indicating units offers many application solutions on low voltage electrical circuits, both in alternating and direct current. Actuators are available for 22 and 30 mm diameter central hole fixing, bodies are both metal and thermoplastic, round and square version. Protection class for all operators is IP65 which means protection against penetration of solids, dust and liquids. The control switches range includes maintained and momentary pushbuttons, illuminated and non-illuminated version, key and knob handle selector switches, pilot lights, joystick operators, mushroom and emergency stop pushbuttons, insulating enclosures, potentiometric controls, mushroom head control stations: a complete range of products built and designed to satisfy every application need.

### Benefits

Fixing of thermoplastic bodies is done through lock-nuts for make the operation very quick, while the metal actuators can be fixed by means of two screws in order to guarantee the maximum mechanical strength, also for heavy applications and in presence of vibrations. The new thermoplastic control stations product line includes 1, 2, 3 and 5 holes enclosures with IP65 protection class and they are easy to be installed to get simple wiring to contact blocks previously mounted on back panel. Contact blocks and power supplies are lock coupled (snapon system) and can be wired separately from operator to obtain high flexibility and easy installation and maintenance. Ingress protection class is IP20, that avoids accidental finger contact on electrical parts. Italweber contact blocks are available front and base mounting and with screw or fast-on terminals. Manufacturing characteristics together with the high modularity level allow a quick mounting and maximum flexibility, reaching a significant time-saving as far as installing operations and a strong cutting of store expenses.

### Approvals

Carefully selected products materials and Italweber expertise assure optimum quality, long time availability and running security of P Series control switches as confirmed by the number of approvals and homologations obtained by the most important International Institutes.

### Safety

The operator for emergency stop pushbuttons has been realized according to IEC/EN 60947-5-5 international standard and to EN 60418 safety requirements. In fact, the special operator body construction based on a spring weight mechanical system allows the positive opening of NC contact whenever the coupling system is voluntarily driven, so avoiding all eventual damage to persons or things.

### Accessories and further products

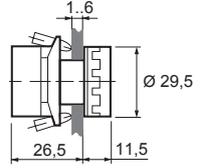

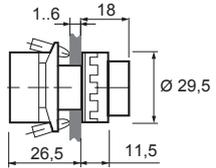

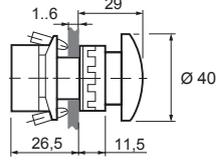

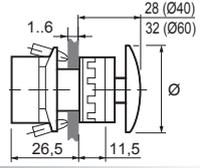

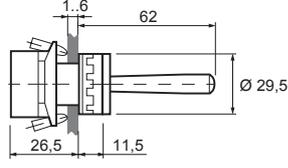

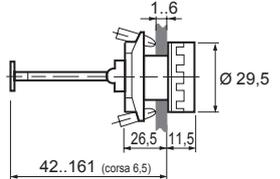

Our range of control switches also covers a wide number of products built to satisfy any application need.

## Caratteristiche tecniche

### Technical specifications

#### Normativa | Standard

I colori per i pulsanti di avviamento sono il bianco, il grigio o il nero, con una preferenza per il bianco. È ammesso anche il verde. Il rosso non deve essere usato.

Il colore rosso deve essere usato per i pulsanti di arresto di emergenza. I colori per i pulsanti di arresto sono il nero, il grigio o il bianco, con una preferenza per il nero. È ammesso anche il rosso. Il verde non deve essere usato.

Il Bianco, il grigio e il nero sono i colori preferiti per i pulsanti che provocano alternativamente l'avviamento o l'arresto. I colori rosso, giallo o verde non devono essere usati.

Il Bianco, il grigio e il nero sono i colori preferiti per i pulsanti che provocano un funzionamento quando sono premuti e un arresto quando sono rilasciati (es. azione mantenuta).

I colori rosso, giallo o verde non devono essere usati. Il verde è riservato per funzioni che indicano condizioni normali o di sicurezza.

Il giallo è riservato per funzioni che indicano attenzione o condizioni anormali. Il blu è riservato per funzioni di significato obbligatorio.

I pulsanti di ripristino devono essere blu, bianchi, grigi o neri. Quando vengono utilizzati anche come pulsanti di arresto/disinserzione vengono preferiti il bianco, il grigio o il nero con una netta preferenza per il nero. Non deve essere utilizzato il verde.

Colours used for starting pushbuttons are white, grey or black, preferably white. Also green is permitted. Red is not to be used. Red must be used for emergency stop pushbuttons.

The colours for the stop pushbuttons are black, grey or white, preferably black. Also red is permitted. Green is not to be used. White, grey and black are recommended colours for start/stop pushbuttons. Not to be used colours are red, yellow or green.

White, grey and black are recommended colours for maintained pushbuttons.

Red, yellow or green are not to be used. Green is the colour reserved to those functions indicating standard or safety conditions. Yellow is the colour reserved to those functions indicating dangerous or non-standard conditions. Blue is the colour reserved to all compulsory functions.

Reset pushbuttons must be blue, white, grey or black. When used as stop/switch off pushbuttons, colours recommended are white, grey or black with a strong preference for black. Green is not to be used.

#### Pulsanti (non luminosi) | Pushbuttons (non-illuminated)

**ROSSO / RED**  
Emergenza (azionare in caso di condizione pericolosa o emergenza). / *Emergency (push in case of danger or emergency).*

**GIALLO / YELLOW**  
Anormale (azionare in caso di condizione anormale). / *Non-standard (push in case of non-standard condition).*  
Intervento per sopprimere una condizione anormale o per riavviare un ciclo automatico interrotto. / *Pushing to stop one non-standard condition or re-start one interrupted automatic cycle.*

**VERDE / GREEN**  
Sicurezza (azionare in caso di condizione di sicurezza). / *Safety (push in case of safety condition or to prepare one standard condition).*

**BLU / BLUE**  
Obbligatorio (azionare in caso di condizione che richiede un'azione obbligatoria). / *Compulsory (push when a condition requires one compulsory action).*  
Funzione di ripristino. / *Reset function.*

**BIANCO / WHITE**  
Non viene attribuito alcun significato specifico / *No particular meaning.*  
Per l'avvio generale delle funzioni ad eccezione dell'arresto di emergenza. Ⓞ  
*For general start of functions except the emergency stop.* Ⓞ  
Avvio (preferenziale) o arresto. / *Start (optional) or stop.*

**GRIGIO / GREY**  
Non viene attribuito alcun significato specifico / *No particular meaning.*  
Per l'avvio generale delle funzioni ad eccezione dell'arresto di emergenza. Ⓞ  
*For general start of functions except the emergency stop.* Ⓞ  
Avvio o arresto. / *Start or stop.*

**NERO / BLACK**  
Non viene attribuito alcun significato specifico / *No particular meaning.*  
Per l'avvio generale delle funzioni ad eccezione dell'arresto di emergenza. Ⓞ  
*For general start of functions, except the emergency stop.* Ⓞ  
Arresto (preferenziale) o avvio. / *Stop (optional) or start.*

Ⓞ Quando viene utilizzato un mezzo supplementare di codifica (es. struttura, forma, posizione) per l'identificazione degli attuatori a pulsante, lo stesso colore bianco, grigio o nero può essere utilizzato per varie funzioni (es. bianco per attuatori di avvio o arresto).

Ⓞ In case of use of an additional coding (for example body, shape, position) to identify pushbuttons actuators, the same colour white, grey or black can be employed for different functions (for example white for starting or stop actuators).

#### Indicatori luminosi | Pilot lights

**ROSSO / RED**  
Emergenza (condizioni pericolose). / *Emergency (dangerous conditions).*  
Azione immediata per trattare una condizione pericolosa (es. azionando l'arresto di emergenza). / *Immediate action to solve one dangerous situation (es. pushing the emergency stop).*

**GIALLO / YELLOW**  
Anormale (condizione anormale o critica). / *Non-standard (non-standard or difficult situation).*  
Controllo o intervento (es. ristabilendo la funzione desiderata). / *Control or intervention (es. re-establishing the desired function).*

**VERDE / GREEN**  
Normale (condizione normale). / *Standard (standard condition).*  
Autorizzazione a procedere. / *Authorization to proceed.*

**BLU / BLUE**  
Obbligatorio (indicazione della condizione che richiede un'azione dell'operatore). / *Compulsory (indicates that an operator intervention is needed).*  
Azione obbligatoria. / *Obligation.*

**BIANCO / WHITE**  
Neutro (controllo e informazione generale) / *Neutral (control and general information).*  
Può essere usato ogni volta che si ha un dubbio sull'impiego dei colori rosso, giallo, verde e blu. / *It can be used in any case of doubt as an alternative to red, yellow, green and blue colours.*

#### Pulsanti luminosi

Gli attuatori dei pulsanti luminosi devono essere colorati secondo il codice colore di "Pulsanti e indicatori luminosi". Quando risulta difficile assegnare un colore appropriato, deve essere usato il bianco.

#### Illuminated pushbuttons

Illuminated pushbuttons actuators must be coloured according to "Pushbuttons and pilot lights" colour code. When a suitable colour is difficult to be determined, it is necessary to use white.

### Technical specifications

CORRENTE ALTERNATA / ALTERNATING CURRENT (IEC / EN 60947-5-1)		Elementi di contatto / Contact blocks						
		V01V10V01LV10E\F01F10\F01LF10E\B01B10\B01LB10E						
		(serie ø22,30)						
Tensione nominale di isolamento / Rated insulation voltage $U_i$	V	690						
Tensione nominale di tenuta a impulso / Rated impulse withstand voltage $U_{imp}$	kV	6						
Tensione nominale d'impiego / Rated operating voltage $U_e$	V	24	48	110/120	240	400	500	600
Corrente nominale d'impiego / Rated operating current $I_e$								
AC-15 Carichi elettromagnetici >72VA / Electromagnetic loads	A	10	8,5	6,5	4,5	2,6	2,1	1,6
AC-12 Carichi resistivi e carichi a stato solido opto-isolati	A	–	–	–	–	–	–	–
Resistive loads and solid state loads with insulation by opto couplers								
AC-13 Carichi a stato solido con trasformatore di isolamento	A	–	–	–	–	–	–	–
Solid state loads with transformer insulation								
Valori nominali per bassi livelli di energia / Rated values for low energy levels		28V DC - 7 mA						
Corrente nominale termica / Thermal rated current								
in aria libera (IEC) / in air (IEC) $I_{th}$	A	12						
in custodia (IEC-UL/CSA) / in enclosure (IEC-UL/CSA) $I_{the}$	A	10						
Categoria / Classe di isolamento / Category / Protection class		Gruppo C / C Group (VDE 01106) - Classe II / Class II (CEI 23-11)						
Potenza dissipata alla corrente termica / Power dissipation at thermal rated current $I_{the}$	W	≤ 0,3						
Protezione contro il cortocircuito / Short-circuit protection		1 kA (fusibile NDZ 10A-500V gL/gG)						

CORRENTE CONTINUA / DIRECT CURRENT (IEC / EN 60947-5-1)		V01V10\F01F10\B01B10						
		V01LV10E\F01LF10E\B01LB10E						
TENSIONE NOMINALE D'IMPIEGO $U_e$ / RATED OPERATING VOLTAGE	V	24	48	125	250	440	500	600
DC-12 Carichi resistivi e carichi a stato solido opto-isolati								
Resistive loads and solid state loads with insulation by opto couplers								
Corrente nominale d'impiego / Rated operating current $I_e$	A	–	–	–	–	–	–	–
DC-13 Comando di elettromagneti / Control of electromagnets								
Corrente nominale d'impiego / Rated operating current $I_e$	A	4	2	1,1	0,55	0,31	0,27	0,2
Durata di vita elettrica in AC con $U_e, I_e$ (cicli di manovre)		200.000 (AC-15)						
Electrical life in AC with $U_e, I_e$ (operations)								
Durata di vita elettrica in DC con $U_e, I_e$ (cicli di manovre)		– (DC-13)						
Electrical life in DC with $U_e, I_e$ (operations)								

UL / CSA		V01V10\F01F10\B01B10	V01LV10E\F01LF10E\B01LB10E
General use		6A-600V AC / 6A-125V DC	6A-600V AC / 4A-125V DC
Heavy Pilot Duty (HD)	codice designazione / code designation	A600(HD)	A600(HD)
Standard Duty (SD)	codice designazione / code designation	P600 (SD)	P150 (SD)

ALIMENTAZIONI (serie Ø22, 30) / POWER SUPPLIES (Ø 22, 30 series)		Diretta Direct supply	Trasformatore Transformer	Resistore Resistor	Lampeggiatore Flasher
Tensione nominale di isolamento / Rated insulation voltage $U_i$	V	250	–	250	250
Tensione nominale di impiego massima / Maximum rated voltage $U_{e max}$	V	250	–	250	24 130
Tensione nominale circuito primario / Rated voltage primary circuit	V	–	110/220 110/220/380	110/48 220/110	– –
Tensione nominale circuito secondario / Rated voltage secondary circuit	V	–	6 24	48 130/48	– –
Frequenza / Frequency	Hz	–	50/60 50/60	– –	50/60 50/60
Frequenza lampeggi al minuto alla tensione nominale		–	–	–	70 ± 10 70 ± 5
Flash frequency at rated voltage (per min)					
Tempo di inizio lampeggi al minuto alla tensione nominale		–	–	–	< 20 sec immediato
Flash begins at minute at rated voltage					immediate
Alimentazione / Power supply		AC-DC	AC-DC	AC-DC AC	AC-DC AC
Potenza nominale d'impiego / Rated power	W	2	0,6..1 2..3	1,2 2..2,6/1,2	2..12 1..12
Resistenza al cortocircuito del secondario per costruzione					
Short-circuit resistant of the secondary circuit for building					
<b>Sezioni massime collegabili / Max connecting cable sections</b>					
Calibro massimo sezione conduttori secondo IEC/EN 60947-5-1		A3	A2	A1	A3
Max cable section according to IEC/EN 60947-1					
Rigido e flessibile / Rigid and stranded	N. x mm <sup>2</sup>	1x0,5..3,3 o 2x2,5	1x1..2,5 o 2x2,5	1x0,75..1,5 o 2x1,5	1x0,5..3,3 o 2x2,5
	N. x AWG	1x20..12 o 2x14	1x14..12 o 2x14	1x18..16 o 2x16	1x20..12 o 2x14
<b>Morsetti / Terminals</b>					
	Tipo / Type	Vite / Screw	Vite / Screw	Vite / Screw	Vite / Screw
	Filettatura / Thread	M3,5	M3,5	M3,5	M3,5
	Grandezza cacciavite Lama/Croce / Screwdriver size blade/cross	3/2	3/2	3/2	3/2

## Caratteristiche tecniche

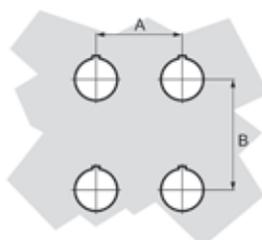

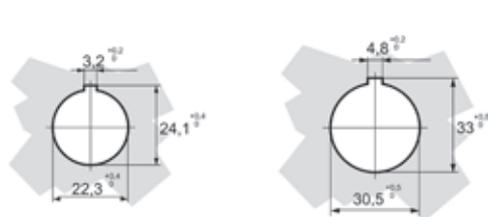

### Technical specifications

INDICATORI LUMINOSI / ILLUMINATED INDICATORS		ø22, 30	Monolitici / Monolithic		Jumbo light
Attacco portalampada / Lampholder type		BA 9s	ø22 BA 9s/E10	ø30 E14/BA 15d	E14
Potenza nominale d'impiego / Rated operating power	W	2	2,6	6	1
Tensione nominale di isolamento / Rated insulating voltage $U_i$	V	250	250	250	250
Tensione nominale d'impiego massima / Rated maximum operating voltage $U_{e \max}$	V	250	250	250	250
Tensione nominale di tenuta a impulso / Impulse withstand rated voltage $U_{imp}$	kV		4	4	4
Sezioni massime collegabili / Max connecting cable sections					
Calibro max sezione conduttori secondo / Max cable section according to IEC/EN 60947-1		A3	B1	A1	A2
Flessibile/Rigido cordato / Stranded / rigid	N. x mm <sup>2</sup>	2x0,5..1,5	2x0,5..1,5	2x0,75..1,5	2x1..2,5
	N. x AWG	2x20..16	2x20..16	2x18..16	2x18..14
<b>Morsetti / Terminals</b>					
	Coppia di serraggio / Torque force Nm	0,8	0,8	0,8	1
	Tipo vite / Screw type	Vite / Screw	Vite / Screw	Vite / Screw	Vite / Screw
	Filettatura / Thread	M3	M3	M3	M3,5
	Grandezza cacciavite Lama/Croce / Screwdriver size blade/cross	2/-	2/-	2/-	3/2

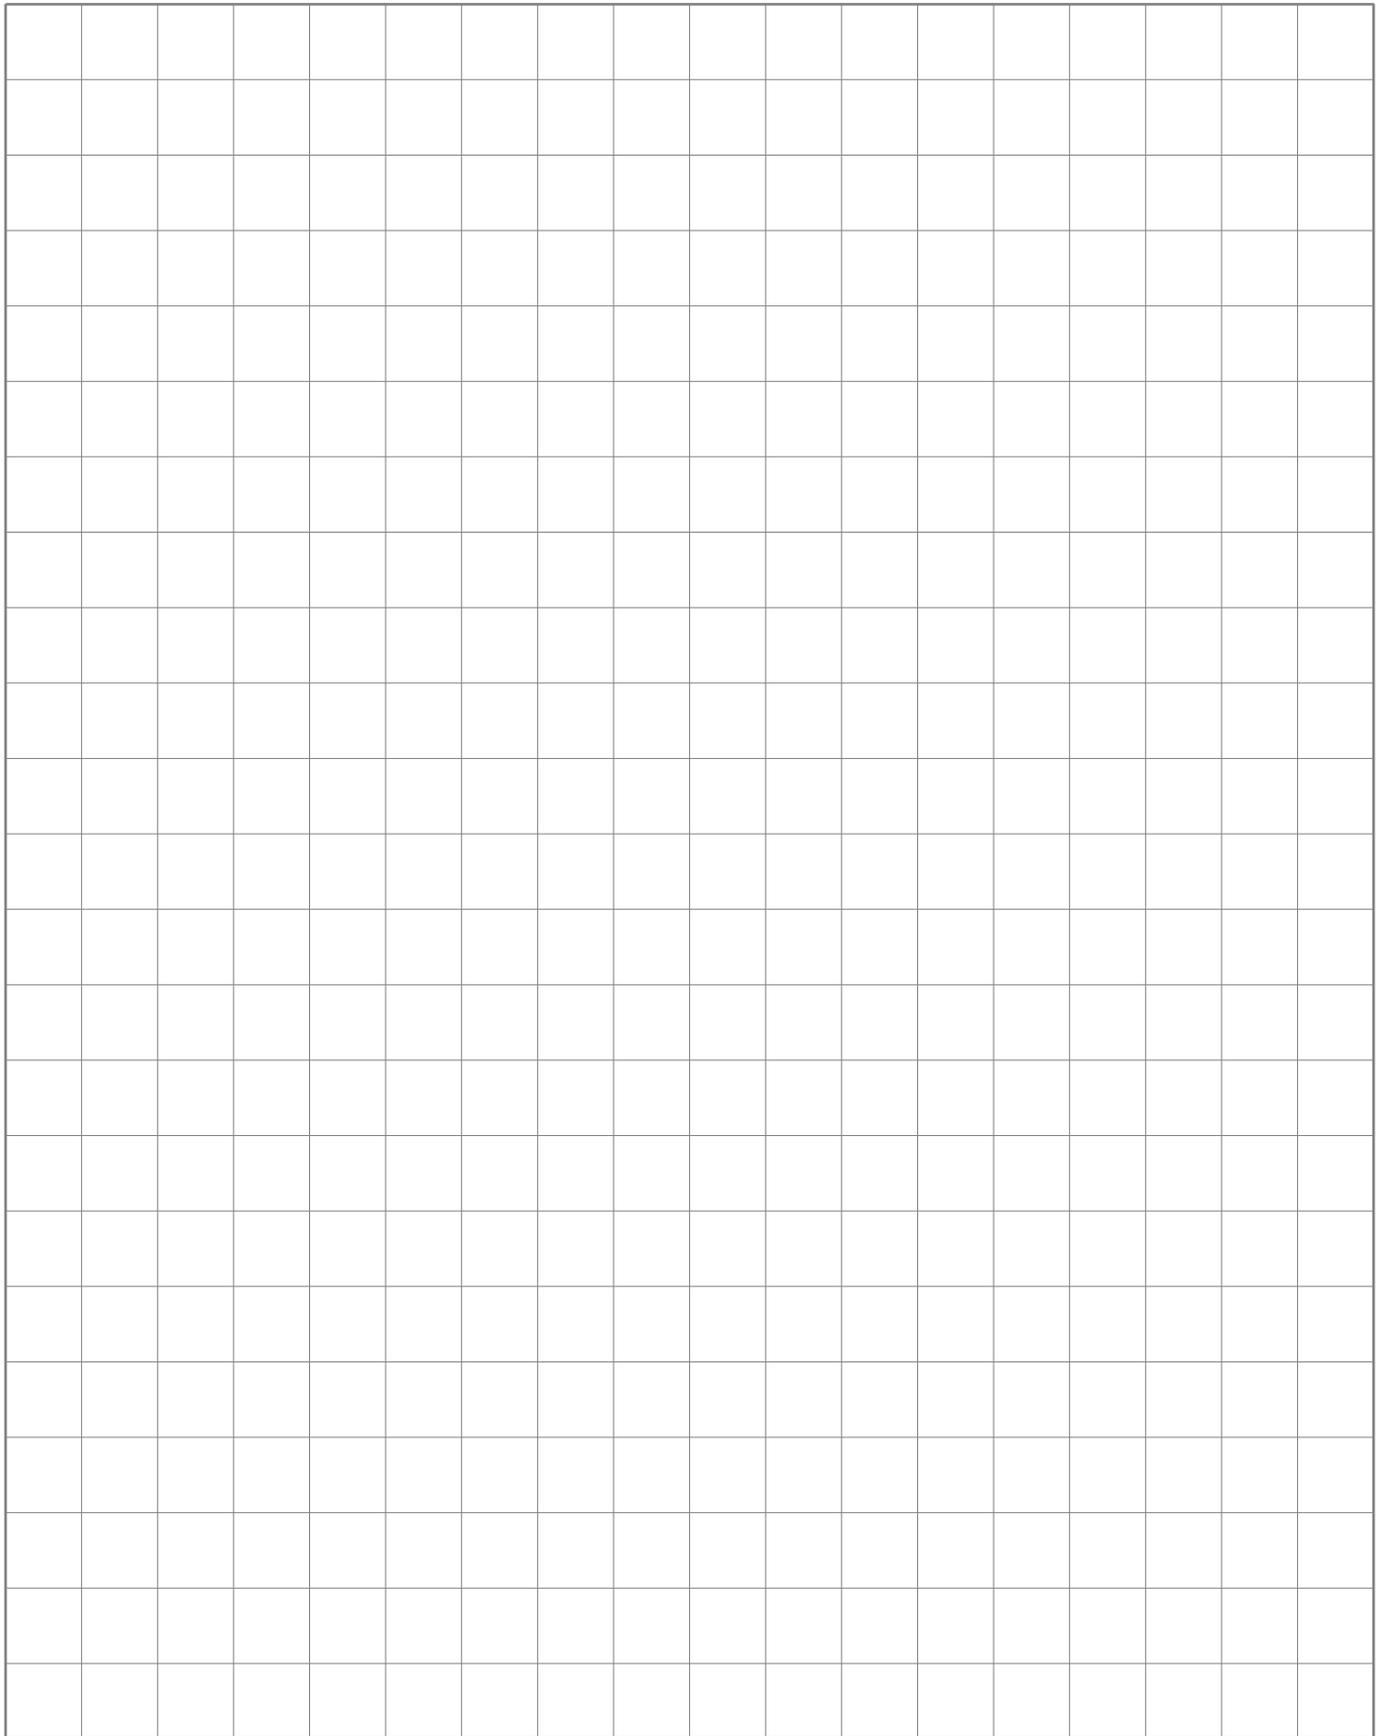

DATI AMBIENTALI / ENVIRONMENTAL DATA		(serie Ø 22, 30 - Monolitici / Monolithic - Jumbo light)	
Temperatura ambiente / Ambient temperature:	Esercizio / Operating	-25°C	... +60°C
	Stoccaggio / Storage	-40°C	... +80°C

DATI MECCANICI / MECHANICAL DATA		V01V10 V01LV10E F01F10 F01LF10E B01B10 B01LB10E (serie Ø 22, 30 - Monolitici / Monolithic - Jumbo light)	
Grado di protezione / Protection degree according IEC / EN 60529		Frontale / Front IP65 - Posteriore / Rear IP20	
<b>Durata di vita meccanica</b> (Milioni di manovre) / <b>Mechanical life</b> (millions of operations)			
Pulsanti instabili luminosi e non luminosi / Illuminated and not illuminated momentary pushbuttons		6	
Pulsanti stabili luminosi e non luminosi / Illuminated and not illuminated maintained pushbuttons		1	
Selettori non luminosi / Non illuminated selector switches		1	
Selettori luminosi / Illuminated selector switches		0,2	
Pulsante a fungo di emergenza / Emergency stop mushroom pushbuttons		0,2	
Pulsanti a fungo stabili / Maintained mushroom pushbuttons		0,2	
Pulsanti stabili passo-passo metallici / Metal push-push maintained pushbuttons		3	
Pulsante stabili passo passo plastici / Thermoplastic push-push maintained pushbuttons		2	
Manipolatori a leva / Joysticks		1	
Pulsantiere con operatori instabili / Control stations with momentary pushbuttons		6	
<b>Resistenza alle vibrazioni</b> (fissaggio retroquadro) / <b>Resistance to vibrations</b> (front mounting)			
Frequenza / Frequency	Hz	2..13,2 - 10..100Hz	
Ampiezza urti/spostamenti / Width of impact/movement	mm	± 1	
Accelerazione / Acceleration	g	0,7	
<b>Sezioni massime collegabili / Maximum cable sections</b>			
Calibro massimo sezione conduttori / Maximum cables section according IEC/EN 60947-5-1		A3	
Rigido e flessibile / Rigid and stranded	N. x mm <sup>2</sup>	1 x 0,5..3,3 o 2 x 2,5	
	N. x AWG	1 x 20..12 o 2 x 14	
<b>Morsetti / Terminals</b>			
	Tipo / Type	Vite / Screw	
	Filettatura / Thread	M3,5	
	Grandezza cacciavite Lama/Croce / Screwdriver size blade/cross	3/2	
	Tipo / Connection type	Innesto / Graft 1x6,3mm or 2x2,8mm	
<b>N. massimo di contatti sugli operatori / Maximum contacts number on operators</b>			
Non luminosi e luminosi con alimentazione diretta / Lighted and unlighted with direct supply		4 (su 2 livelli) / 4 (on 2 levels)	
Selettori non luminosi / Non illuminated selector switches		4 (su 2 livelli) / 4 (on 2 levels)	
Luminosi con trasformatore o resistore / Illuminated with transformer or resistor		2 (su 2 livelli) / 2 (on 2 levels)	
Luminosi e non luminosi passo-passo / Illuminated and non illuminated push-push		2 (su 1 livello) / 2 (on 1 level)
